OPENTELEMETRY C++ API

1.1 Overview

The OpenTelemetry C++ API enables developers to instrument their applications and libraries in order to make them ready to create and emit telemetry data. The OpenTelemetry C++ API exclusively focuses on instrumentation and does not address concerns like exporting, sampling, and aggregating telemetry data. Those concerns are addressed by the OpenTelemetry C++ SDK. This architecture enables developers to instrument applications and libraries with the OpenTelemetry C++ API while being completely agnostic of how telemetry data is exported and processed.

1.1.1 Library design

The OpenTelemetry C++ API is provided as a header-only library and supports all recent versions of the C++ standard, down to C++11.

A single application might dynamically or statically link to different libraries that were compiled with different compilers, while several of the linked libraries are instrumented with OpenTelemetry. OpenTelemetry C++ supports those scenarios by providing a stable ABI. This is achieved by a careful API design, and most notably by providing ABI stable versions of classes from the standard library. All those classes are provided in the `opentelemetry::nostd` namespace.

1.2 Getting started

1.2.1 Tracing

When instrumenting libraries and applications, the most simple approach requires three steps.

Obtain a tracer

```
auto provider = opentelemetry::trace::Provider::GetTracerProvider();
auto tracer = provider->GetTracer("foo_library", "1.0.0");
```

The TracerProvider acquired in the first step is a singleton object that is usually provided by the OpenTelemetry C++ SDK. It is used to provide specific implementations for API interfaces. In case no SDK is used, the API provides a default no-op implementation of a TracerProvider.

The Tracer acquired in the second step is needed to create and start Spans.

Start a span

```
auto span = tracer->StartSpan("HandleRequest");
```

This creates a span, sets its name to "HandleRequest", and sets its start time to the current time. Refer to the API documentation for other operations that are available to enrich spans with additional data.

Mark a span as active

```
auto scope = tracer->WithActiveSpan(span);
```

This marks a span as active and returns a Scope object. The scope object controls how long a span is active. The span remains active for the lifetime of the scope object.

The concept of an active span is important, as any span that is created without explicitly specifying a parent is parented to the currently active span. A span without a parent is called root span.

Create nested Spans

```
auto outer_span = tracer->StartSpan("Outer operation");
auto outer_scope = tracer->WithActiveSpan(outer_span);
{
    auto inner_span = tracer->StartSpan("Inner operation");
    auto inner_scope = tracer->WithActiveSpan(inner_span);
    // ... perform inner operation
    inner_span->End();
}
// ... perform outer operation
outer_span->End();
```

Spans can be nested, and have a parent-child relationship with other spans. When a given span is active, the newly created span inherits the active span's trace ID, and other context attributes.

Context Propagation

```
// set global propagator
opentelemetry::context::propagation::GlobalTextMapPropagator::SetGlobalPropagator(
    std::shared_ptr<opentelemetry::context::propagation::TextMapPropagator>(
        new opentelemetry::trace::propagation::HttpTraceContext()));

// get global propagator
HttpTextMapCarrier<opentelemetry::ext::http::client::Headers> carrier;
auto propagator =
    opentelemetry::context::propagation::GlobalTextMapPropagator::GetGlobalPropagator();

// inject context to headers
auto current_ctx = opentelemetry::context::RuntimeContext::GetCurrent();
propagator->Inject(carrier, current_ctx);

// Extract headers to context
```

(continues on next page)

(continued from previous page)

```
auto current_ctx = opentelemetry::context::RuntimeContext::GetCurrent();
auto new_context = propagator->Extract(carrier, current_ctx);
auto remote_span = opentelemetry::trace::propagation::GetSpan(new_context);
```

Context contains the meta-data of the currently active Span including Span Id, Trace Id, and flags. Context Propagation is an important mechanism in distributed tracing to transfer this Context across service boundary often through HTTP headers. OpenTelemetry provides a text-based approach to propagate context to remote services using the W3C Trace Context HTTP headers.

OPENTELEMETRY C++ SDK

2.1 Getting started

OpenTelemetry C++ SDK provides the reference implementation of OpenTelemetry C++ API, and also provides implementation for Processor, Sampler, and core Exporters as per the specification.

2.2 Exporter

An exporter is responsible for sending the telemetry data to a particular backend. OpenTelemetry offers six tracing exporters out of the box:

- In-Memory Exporter: keeps the data in memory, useful for debugging.
- Jaeger Exporter: prepares and sends the collected telemetry data to a Jaeger backend via UDP and HTTP.
- Zipkin Exporter: prepares and sends the collected telemetry data to a Zipkin backend via the Zipkin APIs.
- Logging Exporter: saves the telemetry data into log streams.
- OpenTelemetry(otlp) Exporter: sends the data to the OpenTelemetry Collector using protobuf/gRPC or proto-buf/HTTP.
- ETW Exporter: sends the telemetry data to Event Tracing for Windows (ETW).

```
//namespace alias used in sample code here.
namespace sdktrace = opentelemetry::sdk::trace;

// logging exporter
auto ostream_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::trace::OStreamSpanExporter);

// memory exporter
auto memory_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::memory::InMemorySpanExporter);

// zipkin exporter
opentelemetry::exporter::zipkin::ZipkinExporterOptions opts;
opts.endpoint = "http://localhost:9411/api/v2/spans" ; // or export OTEL_EXPORTER_ZIPKIN_
//ENDPOINT="..."
opts.service_name = "default_service" ;
```

(continues on next page)

(continued from previous page)

```

auto zipkin_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::zipkin::ZipkinExporter(opts));

// Jaeger UDP exporter
opentelemetry::exporter::jaeger::JaegerExporterOptions opts;
opts.endpoint = "localhost";
opts.server_port = 6831;
auto jaeger_udp_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::jaeger::JaegerExporter(opts));

// Jaeger HTTP exporter
opentelemetry::exporter::jaeger::JaegerExporterOptions opts;
opts.transport_format = opentelemetry::exporter::jaeger::TransportFormat::kThriftHttp;
opts.endpoint = "localhost";
opts.server_port = 14268;
opts.headers = {{}}; // optional headers
auto jaeger_http_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::jaeger::JaegerExporter(opts));

// otlp grpc exporter
opentelemetry::exporter::otlp::OtlpGrpcExporterOptions opts;
opts.endpoint = "localhost:4317";
opts.use_ssl_credentials = true;
opts.ssl_credentials_cacert_as_string = "ssl-certificate";
auto otlp_grpc_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::otlp::OtlpGrpcExporter(opts));

// otlp http exporter
opentelemetry::exporter::otlp::OtlpHttpExporterOptions opts;
opts.url = "http://localhost:4318/v1/traces";
auto otlp_http_exporter =
    std::unique_ptr<sdktrace::SpanExporter>(new_
    opentelemetry::exporter::otlp::OtlpHttpExporter(opts));

```

2.3 Span Processor

Span Processor is initialised with an Exporter. Different Span Processors are offered by OpenTelemetry C++ SDK:

- SimpleSpanProcessor: immediately forwards ended spans to the exporter.
- BatchSpanProcessor: batches the ended spans and send them to exporter in bulk.
- MultiSpanProcessor: Allows multiple span processors to be active and configured at the same time.

```

// simple processor
auto simple_processor = std::unique_ptr<sdktrace::SpanProcessor>(
```

(continues on next page)

(continued from previous page)

```

new sdktrace::SimpleSpanProcessor(std::move(ostream_exporter));

// batch processor
sdktrace::BatchSpanProcessorOptions options{};
auto batch_processor = std::unique_ptr<sdktrace::SpanProcessor>(
    new sdktrace::BatchSpanProcessor(std::move(memory_exporter), options));

// multi-processor
std::vector<std::unique_ptr<SpanProcessor>>
processors{std::move(simple_processor), std::move(batch_processor)};
auto multi_processor = std::unique_ptr<sdktrace::SpanProcessor>(
    new sdktrace::MultiSpanProcessor(std::move(processors)));

```

2.4 Resource

A Resource is an immutable representation of the entity producing telemetry as key-value pair. The OpenTelemetry C++ SDK allow for creation of Resources and for associating them with telemetry.

```

auto resource_attributes = opentelemetry::sdk::resource::ResourceAttributes
{
    {"service.name", "shoppingcart"},
    {"service.instance.id", "instance-12"}
};
auto resource = opentelemetry::sdk::resource::Resource::Create(resource_attributes);
auto received_attributes = resource.GetAttributes();
// received_attributes contains
// - service.name = shoppingcart
// - service.instance.id = instance-12
// - telemetry.sdk.name = opentelemetry
// - telemetry.sdk.language = cpp
// - telemetry.sdk.version = <current sdk version>

```

It is possible to define the custom resource detectors by inhering from *opentelemetry::sdk::Resource::ResourceDetector* class.

2.5 Sampler

Sampling is mechanism to control/reducing the number of samples of traces collected and sent to the backend. OpenTelemetry C++ SDK offers four samplers out of the box:

- AlwaysOnSampler which samples every trace regardless of upstream sampling decisions.
- AlwaysOffSampler which doesn't sample any trace, regardless of upstream sampling decisions.
- ParentBased which uses the parent span to make sampling decisions, if present.
- TraceIdRatioBased which samples a configurable percentage of traces.

```

//AlwaysOnSampler
auto always_on_sampler = std::unique_ptr<sdktrace::AlwaysOnSampler>

```

(continues on next page)

(continued from previous page)

```
(new sdktrace::AlwaysOnSampler);

//AlwaysOffSampler
auto always_off_sampler = std::unique_ptr<sdktrace::AlwaysOffSampler>
    (new sdktrace::AlwaysOffSampler);

//ParentBasedSampler
auto parent_based_sampler = std::unique_ptr<sdktrace::ParentBasedSampler>
    (new sdktrace::ParentBasedSampler);

//TraceIdRatioBasedSampler - Sample 50% generated spans
double ratio      = 0.5;
auto always_off_sampler = std::unique_ptr<sdktrace::TraceIdRatioBasedSampler>
    (new sdktrace::TraceIdRatioBasedSampler(ratio));
```

2.6 TracerContext

SDK configuration are shared between *TracerProvider* and all it's *Tracer* instances through *TracerContext*.

```
auto tracer_context = std::make_shared<sdktrace::TracerContext>
    (std::move(multi_processor), resource, std::move(always_on_sampler));
```

2.7 TracerProvider

TracerProvider instance holds the SDK configurations (Span Processors, Samplers, Resource). There is single global *TracerProvider* instance for an application, and it is created at the start of application. There are two different mechanisms to create *TracerProvider* instance

- Using constructor which takes already created *TracerContext* shared object as parameter.
- Using constructor which takes SDK configurations as parameter.

```
// Created using `TracerContext` instance
auto tracer_provider = std::shared_ptr<sdktrace::TracerProvider>
    (new sdktrace::TracerProvider(tracer_context));

// Create using SDK configurations as parameter
auto tracer_provider = std::shared_ptr<sdktrace::TracerProvider>
    (std::move(simple_processor), resource, std::move(always_on_sampler));

// set the global tracer TraceProvider
opentelemetry::trace::Provider::SetTracerProvider(tracer_provider);
```

2.8 Logging and Error Handling

OpenTelemetry C++ SDK provides mechanism for application owner to add customer log and error handler. The default log handler is redirected to standard output (using std::cout).

The logging macro supports logging using C++ stream format, and key-value pair. The log handler is meant to capture errors and warnings arising from SDK, not supposed to be used for the application errors. The different log levels are supported - Error, Warn, Info and Debug. The default log level is Warn (to dump both Error and Warn) and it can be changed at compile time.

```
OTEL_INTERNAL_LOG_ERROR(" Connection failed. Error string " << error_str << " Error Num:
↳ " << errno);
opentelemetry::sdk::common::AttributeMap error_attributes = {
    {"url", url}, {"content-length", len}, {"content-type", type}};
OTEL_INTERNAL_LOG_ERROR(" Connection failed.", error_attributes);
opentelemetry::sdk::common::AttributeMap http_attributes = {
    {"url", url}, {"content-length", len}, {"content-type", type}};
OTEL_INTERNAL_LOG_DEBUG(" Connection Established Successfully. Headers:", http_
↳ attributes);
```

The custom log handler can be defined by inheriting from *opentelemetry::sdk::common::internal_log::LogHandler* class.

```
class CustomLogHandler : public opentelemetry::sdk::common::internal_log::LogHandler
{
    void Handle(opentelemetry::sdk::common::internal_log::LogLevel level,
               const char *file,
               int line,
               const char *msg,
               const opentelemetry::sdk::common::AttributeMap &attributes) noexcept
    ↳override

    {
        // add implementation here
    }
};

opentelemetry::sdk::common::internal_
↳log::GlobalLogHandler::SetLogHandler(CustomLogHandler());
opentelemetry::sdk::common::internal_
↳log::GlobalLogHandler::SetLogLevel(opentelemetry::sdk::common::internal_
↳log::LogLevel::Debug);
```

Struct BatchSpanProcessorOptions

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_batch_span_processor_options.h

Struct Documentation

struct **BatchSpanProcessorOptions**

Struct to hold batch *SpanProcessor* options.

Public Members

size_t **max_queue_size** = 2048

The maximum buffer/queue size. After the size is reached, spans are dropped.

std::chrono::milliseconds **schedule_delay_millis** = std::chrono::milliseconds(5000)

```
size_t max_export_batch_size = 512
```

The maximum batch size of every export. It must be smaller or equal to max_queue_size.

Struct MultiSpanProcessor::ProcessorNode

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_multi_span_processor.h

Nested Relationships

This struct is a nested type of [Class MultiSpanProcessor](#).

Struct Documentation

```
struct ProcessorNode
```

Public Functions

```
inline ProcessorNode(std::unique_ptr<SpanProcessor> &&value, ProcessorNode *prev = nullptr,  
ProcessorNode *next = nullptr)
```

Public Members

```

static constexpr char kMetadataSeparator = ';'
```

Class *BaggagePropagator*

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_baggage_propagation_baggage_propagator.h

Inheritance Relationships

Base Type

- public opentelemetry::context::propagation::TextMapPropagator

Class Documentation

```
class BaggagePropagator : public opentelemetry::context::propagation::TextMapPropagator
```

Public Functions

```
inline void Inject(opentelemetry::context::propagation::TextMapCarrier &carrier, const opentelemetry::context::Context &context) noexcept override  
  
inline context::Context Extract(const opentelemetry::context::propagation::TextMapCarrier &carrier, opentelemetry::context::Context &context) noexcept override  
  
inline bool Fields(std::function_ref<bool(std::string_view)> callback) const noexcept override
```

Class DurationUtil

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_common_timestamp.h

Class Documentation

class **DurationUtil**

Public Static Functions

```
template<class Rep, class Period>  
static inline std::chrono::duration<Rep, Period> AdjustWaitForTimeout(std::chrono::duration<Rep,  
Period> timeout,  
std::chrono::duration<Rep, Period> indefinite_value)  
noexcept
```

Class KeyValueIterable

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_common_key_value_iterable.h

Class Documentation

class **KeyValueIterable**

Supports internal iteration over a collection of key-value pairs.

Public Functions

`virtual ~KeyValueIterable() = default`

`virtual bool ForEachKeyValue(nostd::function_ref<bool(nostd::string_view, common::AttributeValue)> callback) const noexcept = 0`

Iterate over key-value pairs

Parameters `callback` – a callback to invoke for each key-value. If the callback returns false, the iteration is aborted.

Returns true if every key-value pair was iterated over

`virtual size_t size() const noexcept = 0`

Returns the number of key-value pairs

Class SteadyTimestamp

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_common_timestamp.h

Class Documentation

`class SteadyTimestamp`

A timepoint relative to the monotonic clock epoch.

This is used for calculating the duration of an operation.

Public Functions

`inline SteadyTimestamp() noexcept`

Initializes a monotonic timestamp pointing to the start of the epoch.

`template<class Rep, class Period>`

`inline explicit SteadyTimestamp(const std::chrono::duration<Rep, Period> &time_since_epoch) noexcept`

Initializes a monotonic timestamp from a duration.

Parameters `time_since_epoch` – Time elapsed since the beginning of the epoch.

`inline SteadyTimestamp(const std::chrono::steady_clock::time_point &time_point) noexcept`

Initializes a monotonic timestamp based on a point in time.

Parameters `time_point` – A point in time.

`inline operator std::chrono::steady_clock::time_point() const noexcept`

Returns a time point for the time stamp.

Returns A time point corresponding to the time stamp.

`inline std::chrono::nanoseconds time_since_epoch() const noexcept`

Returns the nanoseconds since the beginning of the epoch.

Returns Elapsed nanoseconds since the beginning of the epoch for this timestamp.

```
inline bool operator==(const SteadyTimestamp &other) const noexcept  
    Compare two steady time stamps.
```

Returns true if the two time stamps are equal.

```
inline bool operator!=(const SteadyTimestamp &other) const noexcept  
    Compare two steady time stamps for inequality.
```

Returns true if the two time stamps are not equal.

Class SystemTimestamp

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_common_timestamp.h

Class Documentation

class **SystemTimestamp**

A timepoint relative to the system clock epoch.

This is used for marking the beginning and end of an operation.

Public Functions

```
inline SystemTimestamp() noexcept
```

Initializes a system timestamp pointing to the start of the epoch.

```
template<class Rep, class Period>
```

```
inline explicit SystemTimestamp(const std::chrono::duration<Rep, Period> &time_since_epoch) noexcept
```

Initializes a system timestamp from a duration.

Parameters **time_since_epoch** – Time elapsed since the beginning of the epoch.

```
inline SystemTimestamp(const std::chrono::system_clock::time_point &time_point) noexcept
```

Initializes a system timestamp based on a point in time.

Parameters **time_point** – A point in time.

```
inline operator std::chrono::system_clock::time_point() const noexcept
```

Returns a time point for the time stamp.

Returns A time point corresponding to the time stamp.

```
inline std::chrono::nanoseconds time_since_epoch() const noexcept
```

Returns the nanoseconds since the beginning of the epoch.

Returns Elapsed nanoseconds since the beginning of the epoch for this timestamp.

```
inline bool operator==(const SystemTimestamp &other) const noexcept
```

Compare two steady time stamps.

Returns true if the two time stamps are equal.

```
inline bool operator!=(const SystemTimestamp &other) const noexcept
```

Compare two steady time stamps for inequality.

Returns true if the two time stamps are not equal.

Class Context

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_context.h

Class Documentation

class **Context**

Public Functions

```
Context() = default

template<class T>
inline Context(const T &keys_and_values) noexcept

inline Context(nostd::string_view key, ContextValue value) noexcept

template<class T>
inline Context SetValues(T &values) noexcept

inline Context SetValue(nostd::string_view key, ContextValue value) noexcept

inline context::ContextValue GetValue(const nostd::string_view key) const noexcept

inline bool HasKey(const nostd::string_view key) const noexcept

inline bool operator==(const Context &other) const noexcept
```

Class CompositePropagator

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_propagation_composite_propagator.h

Inheritance Relationships

Base Type

- public opentelemetry::context::propagation::TextMapPropagator

Class Documentation

class **CompositePropagator** : public opentelemetry::context::propagation::TextMapPropagator

Public Functions

```
inline CompositePropagator(std::vector<std::unique_ptr<TextMapPropagator>> propagators)
```

```
inline void Inject(TextMapCarrier &carrier, const context::Context &context) noexcept override
```

Run each of the configured propagators with the given context and carrier. Propagators are run in the order they are configured, so if multiple propagators write the same carrier key, the propagator later in the list will “win”.

Parameters

- **carrier** – Carrier into which context will be injected
- **context** – Context to inject

```
inline context::Context Extract(const TextMapCarrier &carrier, context::Context &context) noexcept override
```

Run each of the configured propagators with the given context and carrier. Propagators are run in the order they are configured, so if multiple propagators write the same context key, the propagator later in the list will “win”.

Parameters

- **carrier** – Carrier from which to extract context
- **context** – Context to add values to

```
inline bool Fields(nostd::function_ref<bool(nostd::string_view)> callback) const noexcept override
```

Invoke callback with fields set to carrier by `inject` method for all the configured propagators Returns true if all invocation return true

Class GlobalTextMapPropagator

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_propagation_global_propagator.h

Class Documentation

```
class GlobalTextMapPropagator
```

Public Static Functions

```
static inline nostd::shared_ptr<TextMapPropagator> GetGlobalPropagator() noexcept
```

```
static inline void SetGlobalPropagator(nostd::shared_ptr<TextMapPropagator> prop) noexcept
```

Class NoOpPropagator

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_propagation_noop_propagator.h

Inheritance Relationships

Base Type

- public opentelemetry::context::propagation::TextMapPropagator

Class Documentation

```
class NoOpPropagator : public opentelemetry::context::propagation::TextMapPropagator
    No-op implementation TextMapPropagator
```

Public Functions

```
inline context::Context Extract(const TextMapCarrier&, context::Context &context) noexcept override
    Noop extract function does nothing and returns the input context
inline void Inject(TextMapCarrier&, const context::Context&) noexcept override
    Noop inject function does nothing
inline bool Fields(nostd::function_ref<bool(nostd::string_view)>) const noexcept override
```

Class TextMapCarrier

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_propagation_text_map_propagator.h

Class Documentation

```
class TextMapCarrier
```

Public Functions

```
virtual nostd::string_view Get(nostd::string_view key) const noexcept = 0
virtual void Set(nostd::string_view key, nostd::string_view value) noexcept = 0
inline virtual bool Keys(nostd::function_ref<bool(nostd::string_view)>) const noexcept
virtual ~TextMapCarrier() = default
```

Class TextMapPropagator

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_context_propagation_text_map_propagator.h

Inheritance Relationships

Derived Types

- public opentelemetry::baggage::propagation::BaggagePropagator (*Class BaggagePropagator*)
- public opentelemetry::context::propagation::CompositePropagator (*Class CompositePropagator*)
- public opentelemetry::context::propagation::NoOpPropagator (*Class NoOpPropagator*)
- public opentelemetry::trace::propagation::B3PropagatorExtractor (*Class B3PropagatorExtractor*)
- public opentelemetry::trace::propagation::HttpTraceContext (*Class HttpTraceContext*)
- public opentelemetry::trace::propagation::JaegerPropagator (*Class JaegerPropagator*)

Class Documentation

class TextMapPropagator

Subclassed by *opentelemetry::baggage::propagation::BaggagePropagator*, *opentelemetry::context::propagation::CompositePropagator*, *opentelemetry::context::propagation::NoOpPropagator*, *opentelemetry::trace::propagation::B3PropagatorExtractor*, *opentelemetry::trace::propagation::HttpTraceContext*, *opentelemetry::trace::propagation::JaegerPropagator*

Public Functions

```
virtual context::Context Extract(const TextMapCarrier &carrier, context::Context &context) noexcept = 0  
virtual void Inject(TextMapCarrier &carrier, const context::Context &context) noexcept = 0  
virtual bool Fields(std::function_ref<bool(std::string_view)> callback) const noexcept = 0  
virtual ~TextMapPropagator() = default
```

Class RuntimeContext

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_context_runtime_context.h

Class Documentation

class **RuntimeContext**

Public Static Functions

```
static inline Context GetCurrent() noexcept
static inline std::unique_ptr<Token> Attach(const Context &context) noexcept
static inline bool Detach(Token &token) noexcept
static inline Context SetValue(std::string_view key, const ContextValue &value, Context *context =
    nullptr) noexcept
static inline ContextValue GetValue(std::string_view key, Context *context = nullptr) noexcept
static inline void SetRuntimeContextStorage(std::shared_ptr<RuntimeContextStorage> storage)
    noexcept
```

Provide a custom runtime context storage.

This provides a possibility to override the default thread-local runtime context storage. This has to be set before any spans are created by the application, otherwise the behavior is undefined.

Parameters **storage** – a custom runtime context storage

```
static inline std::shared_ptr<const RuntimeContextStorage> GetConstRuntimeContextStorage()
    noexcept
```

Provide a pointer to const runtime context storage.

The returned pointer can only be used for extending the lifetime of the runtime context storage.

Class RuntimeContextStorage

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_runtime_context.h

Inheritance Relationships

Derived Type

- public opentelemetry::context::ThreadLocalStorage (*Class ThreadLocalStorage*)

Class Documentation

class **RuntimeContextStorage**

RuntimeContextStorage is used by RuntimeContext to store Context frames.

Custom context management strategies can be implemented by deriving from this class and passing an initialized *RuntimeContextStorage* object to RuntimeContext::SetRuntimeContextStorage.

Subclassed by *opentelemetry::context::ThreadLocalStorage*

Public Functions

virtual *Context* **GetCurrent()** noexcept = 0

Return the current context.

Returns the current context

virtual *std::unique_ptr<Token>* **Attach**(const *Context* &context) noexcept = 0

Set the current context.

Parameters **the** – new current context

Returns a token for the new current context. This never returns a nullptr.

virtual bool **Detach**(*Token* &token) noexcept = 0

Detach the context related to the given token.

Parameters **token** – a token related to a context

Returns true if the context could be detached

inline virtual ~**RuntimeContextStorage**()

Protected Functions

inline *std::unique_ptr<Token>* **CreateToken**(const *Context* &context) noexcept

Class **ThreadLocalStorage**

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_runtime_context.h

Inheritance Relationships

Base Type

- public *opentelemetry::context::RuntimeContextStorage* (*Class RuntimeContextStorage*)

Class Documentation

```
class ThreadLocalStorage : public opentelemetry::context::RuntimeContextStorage
```

Public Functions

```
ThreadLocalStorage() noexcept = default  
inline Context GetCurrent() noexcept override  
inline bool Detach(Token &token) noexcept override  
inline nostd::unique_ptr<Token> Attach(const Context &context) noexcept override
```

Class Token

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_context_runtime_context.h

Class Documentation

```
class Token
```

Public Functions

```
inline bool operator==(const Context &other) const noexcept  
inline ~Token() noexcept
```

Template Class Counter

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_sync_instruments.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::SynchronousInstrument

Derived Types

- public opentelemetry::metrics::NoopCounter< T > (*Template Class NoopCounter*)
- public opentelemetry::sdk::metrics::DoubleCounter (*Class DoubleCounter*)
- public opentelemetry::sdk::metrics::LongCounter< T > (*Template Class LongCounter*)

Class Documentation

```
template<class T>

class Counter : public opentelemetry::metrics::SynchronousInstrument
    Subclassed by opentelemetry::metrics::NoopCounter< T >, opentelemetry::sdk::metrics::DoubleCounter,
    opentelemetry::sdk::metrics::LongCounter< T >
```

Public Functions

```
virtual void Add(T value) noexcept = 0
```

Add adds the value to the counter's sum

Parameters **value** – The increment amount. MUST be non-negative.

```
virtual void Add(T value, const opentelemetry::context::Context &context) noexcept = 0
```

```
virtual void Add(T value, const common::KeyValueIterable &attributes) noexcept = 0
```

Add adds the value to the counter's sum. The attributes should contain the keys and values to be associated with this value. Counters only accept positive valued updates.

Parameters

- **value** – The increment amount. MUST be non-negative.
- **attributes** – the set of attributes, as key-value pairs

```
virtual void Add(T value, const common::KeyValueIterable &attributes, const opentelemetry::context::Context &context) noexcept = 0
```

```
template<class U, std::enable_if_t<common::detail::is_key_value_iterable<U>::value>* = nullptr>
inline void Add(T value, const U &attributes) noexcept
```

```
template<class U, std::enable_if_t<common::detail::is_key_value_iterable<U>::value>* = nullptr>
inline void Add(T value, const U &attributes, const opentelemetry::context::Context &context) noexcept
```

```
inline void Add(T value, std::initializer_list<std::pair<std::string_view, common::AttributeValue>> attributes) noexcept
```

```
inline void Add(T value, std::initializer_list<std::pair<std::string_view, common::AttributeValue>> attributes, const opentelemetry::context::Context &context) noexcept
```

Template Class Histogram

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_sync_instruments.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::SynchronousInstrument

Derived Types

- public opentelemetry::metrics::NoopHistogram< T > (*Template Class NoopHistogram*)
- public opentelemetry::sdk::metrics::LongHistogram< T > (*Template Class LongHistogram*)

Class Documentation

```
template<class T>

class Histogram : public opentelemetry::metrics::SynchronousInstrument
{
    A histogram instrument that records values.

    Subclassed by opentelemetry::metrics::NoopHistogram< T >, opentelemetry::sdk::metrics::LongHistogram< T >
}
```

Public Functions

`virtual void Record(T value, const opentelemetry::context::Context &context) noexcept = 0`

Records a value.

Parameters **value** – The increment amount. May be positive, negative or zero.

`virtual void Record(T value, const common::KeyValueIterable &attributes, const opentelemetry::context::Context &context) noexcept = 0`

Records a value with a set of attributes.

Parameters

- value** – The increment amount. May be positive, negative or zero.
- attributes** – A set of attributes to associate with the count.

```
template<class U, std::enable_if_t<common::detail::is_key_value_iterable<U>::value>* = nullptr>
inline void Record(T value, const U &attributes, const opentelemetry::context::Context &context) noexcept

inline void Record(T value, std::initializer_list<std::pair<const std::string_view, common::AttributeValue>>
                  attributes, const opentelemetry::context::Context &context) noexcept
```

Class Meter

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_meter.h

Inheritance Relationships

Derived Types

- public opentelemetry::metrics::NoopMeter (*Class NoopMeter*)
- public opentelemetry::sdk::metrics::Meter (*Class Meter*)

Class Documentation

class Meter

Handles instrument creation and provides a facility for batch recording.

This class provides methods to create new metric instruments, record a batch of values to a specified set of instruments, and collect measurements from all instruments.

Subclassed by *opentelemetry::metrics::NoopMeter*, *opentelemetry::sdk::metrics::Meter*

Public Functions

virtual ~Meter() = default

virtual std::unique_ptr<*Counter*<uint64_t>> **CreateUInt64Counter**(std::string_view name,
std::string_view description = "",
std::string_view unit = "")
noexcept = 0

Creates a Counter with the passed characteristics and returns a unique_ptr to that Counter.

Parameters

- name** – the name of the new Counter.
- description** – a brief description of what the Counter is used for.
- unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

Returns a shared pointer to the created Counter.

virtual std::unique_ptr<*Counter*<double>> **CreateDoubleCounter**(std::string_view name,
std::string_view description = "",
std::string_view unit = "") noexcept
= 0

virtual std::shared_ptr<*ObservableInstrument*> **CreateInt64ObservableCounter**(std::string_view
name,
std::string_view
description = "",
std::string_view
unit = "") noexcept
= 0

Creates a Asynchronous (Observable) counter with the passed characteristics and returns a shared_ptr to that Observable Counter

Parameters

- **name** – the name of the new Observable Counter.
- **description** – a brief description of what the Observable Counter is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

```
virtual nostd::shared_ptr<ObservableInstrument> CreateDoubleObservableCounter(nostd::string_view
                                                                 name,
                                                                 nostd::string_view
                                                                 description = "",
                                                                 nostd::string_view
                                                                 unit = "") noexcept =
0

virtual nostd::unique_ptr<Histogram<uint64_t>> CreateUInt64Histogram(nostd::string_view name,
                                                               nostd::string_view description =
                                                               "", nostd::string_view unit =
                                                               "") noexcept = 0
```

Creates a *Histogram* with the passed characteristics and returns a unique_ptr to that *Histogram*.

Parameters

- **name** – the name of the new *Histogram*.
- **description** – a brief description of what the *Histogram* is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

Returns a shared pointer to the created *Histogram*.

```
virtual nostd::unique_ptr<Histogram<double>> CreateDoubleHistogram(nostd::string_view name,
                                                               nostd::string_view description =
                                                               "", nostd::string_view unit =
                                                               "") noexcept = 0

virtual nostd::shared_ptr<ObservableInstrument> CreateInt64ObservableGauge(nostd::string_view name,
                                                               nostd::string_view
                                                               description = "",
                                                               nostd::string_view unit =
                                                               "") noexcept = 0
```

Creates a Asynchronouse (Observable) Gauge with the passed characteristics and returns a shared_ptr to that Observable Counter

Parameters

- **name** – the name of the new Observable Gauge.
- **description** – a brief description of what the Observable Gauge is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

```
virtual nostd::shared_ptr<ObservableInstrument> CreateDoubleObservableGauge(nostd::string_view
                                                                 name,
                                                                 nostd::string_view
                                                                 description = "",
                                                                 nostd::string_view
                                                                 unit =
                                                                 "") noexcept = 0
```

```
virtual std::unique_ptr<UpDownCounter<int64_t>> CreateInt64UpDownCounter(std::string_view
    name,
    std::string_view
    description = "",
    std::string_view unit
    = "") noexcept = 0
```

Creates an *UpDownCounter* with the passed characteristics and returns a unique_ptr to that *UpDownCounter*.

Parameters

- **name** – the name of the new *UpDownCounter*.
- **description** – a brief description of what the *UpDownCounter* is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

Returns a shared pointer to the created *UpDownCounter*.

```
virtual std::unique_ptr<UpDownCounter<double>> CreateDoubleUpDownCounter(std::string_view
    name,
    std::string_view
    description = "",
    std::string_view
    unit = "") noexcept =
0
```

```
virtual std::shared_ptr<ObservableInstrument> CreateInt64ObservableUpDownCounter(std::string_view
    name,
    std::string_view
    description = "",
    std::string_view
    unit = "") noexcept =
0
```

Creates a Asynchronous (Observable) *UpDownCounter* with the passed characteristics and returns a shared_ptr to that Observable *UpDownCounter*

Parameters

- **name** – the name of the new Observable *UpDownCounter*.
- **description** – a brief description of what the Observable *UpDownCounter* is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

```
virtual std::shared_ptr<ObservableInstrument> CreateDoubleObservableUpDownCounter(std::string_view
    name,
    std::string_view
    description = "",
    std::string_view
    unit = "") noexcept =
0
```

Class MeterProvider

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_meter_provider.h

Inheritance Relationships

Derived Types

- public opentelemetry::metrics::NoopMeterProvider (*Class NoopMeterProvider*)
- public opentelemetry::sdk::metrics::MeterProvider (*Class MeterProvider*)

Class Documentation

class MeterProvider

Creates new *Meter* instances.

Subclassed by *opentelemetry::metrics::NoopMeterProvider*, *opentelemetry::sdk::metrics::MeterProvider*

Public Functions

virtual ~**MeterProvider**() = default

virtual `nostd::shared_ptr<Meter> GetMeter(nostd::string_view library_name, nostd::string_view library_version = "", nostd::string_view schema_url = "") noexcept = 0`

Gets or creates a named *Meter* instance.

Optionally a version can be passed to create a named and versioned *Meter* instance.

Template Class NoopCounter

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::Counter< T >

Class Documentation

```
template<class T>
class NoopCounter : public opentelemetry::metrics::Counter<T>
```

Public Functions

```
inline NoopCounter(nostd::string_view, nostd::string_view, nostd::string_view) noexcept
inline void Add(T) noexcept override
inline void Add(T, const opentelemetry::context::Context&) noexcept override
inline void Add(T, const common::KeyValueIterable&) noexcept override
inline void Add(T, const common::KeyValueIterable&, const opentelemetry::context::Context&) noexcept
override
```

Template Class NoopHistogram

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::*Histogram*< T > (*Template Class Histogram*)

Class Documentation

```
template<class T>
class NoopHistogram : public opentelemetry::metrics::Histogram<T>
```

Public Functions

```
inline NoopHistogram(nostd::string_view, nostd::string_view, nostd::string_view) noexcept
inline void Record(T, const opentelemetry::context::Context&) noexcept override
inline void Record(T, const common::KeyValueIterable&, const opentelemetry::context::Context&) noexcept
override
```

Class NoopMeter

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::Meter (*Class Meter*)

Class Documentation

class **NoopMeter** : public opentelemetry::metrics::*Meter*

No-op implementation of *Meter*.

Public Functions

```
inline virtual nostd::unique_ptr<Counter<uint64_t>> CreateUInt64Counter(nostd::string_view name,  
                           nostd::string_view description  
                           = "", nostd::string_view unit =  
                           "") noexcept override
```

Creates a Counter with the passed characteristics and returns a unique_ptr to that Counter.

Parameters

- name** – the name of the new Counter.
- description** – a brief description of what the Counter is used for.
- unit** – the unit of metric values following <https://unitsofmeasure.org/ucom.html>.

Returns a shared pointer to the created Counter.

```
inline virtual nostd::unique_ptr<Counter<double>> CreateDoubleCounter(nostd::string_view name,  
                           nostd::string_view description  
                           = "", nostd::string_view unit = "")  
                           noexcept override
```

```
inline virtual nostd::shared_ptr<ObservableInstrument> CreateInt64ObservableCounter(nostd::string_view  
                                         name,  
                                         nostd::string_view  
                                         description = "",  
                                         nostd::string_view  
                                         unit = "")  
                                         noexcept  
                                         override
```

Creates a Asynchronous (Observable) counter with the passed characteristics and returns a shared_ptr to that Observable Counter

Parameters

- name** – the name of the new Observable Counter.

- **description** – a brief description of what the Observable Counter is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

```
inline virtual std::shared_ptr<ObservableInstrument> CreateDoubleObservableCounter(std::string_view name,  
                                     std::string_view description = "",  
                                     std::string_view unit = "")  
noexcept override
```

```
inline virtual std::unique_ptr<Histogram<uint64_t>> CreateUInt64Histogram(std::string_view name,  
                           std::string_view description = "",  
                           std::string_view unit = "") noexcept override
```

Creates a *Histogram* with the passed characteristics and returns a unique_ptr to that *Histogram*.

Parameters

- **name** – the name of the new *Histogram*.
- **description** – a brief description of what the *Histogram* is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

Returns a shared pointer to the created *Histogram*.

```
inline virtual std::unique_ptr<Histogram<double>> CreateDoubleHistogram(std::string_view name,  
                           std::string_view description = "",  
                           std::string_view unit = "") noexcept override
```

```
inline virtual std::shared_ptr<ObservableInstrument> CreateInt64ObservableGauge(std::string_view name,  
                           std::string_view description = "",  
                           std::string_view unit = "")  
noexcept override
```

Creates a Asynchronouse (Observable) Gauge with the passed characteristics and returns a shared_ptr to that Observable Counter

Parameters

- **name** – the name of the new Observable Gauge.
- **description** – a brief description of what the Observable Gauge is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

```
inline virtual std::shared_ptr<ObservableInstrument> CreateDoubleObservableGauge(std::string_view
    name,
    std::string_view
    description = "",
    std::string_view
    unit = "")  
noexcept  
override

inline virtual std::unique_ptr<UpDownCounter<int64_t>> CreateInt64UpDownCounter(std::string_view
    name,
    std::string_view
    description = "",
    std::string_view
    unit = "")  
noexcept  
override
```

Creates an *UpDownCounter* with the passed characteristics and returns a unique_ptr to that *UpDownCounter*.

Parameters

- **name** – the name of the new *UpDownCounter*.
- **description** – a brief description of what the *UpDownCounter* is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

Returns a shared pointer to the created *UpDownCounter*.

```
inline virtual std::unique_ptr<UpDownCounter<double>> CreateDoubleUpDownCounter(std::string_view
    name,
    std::string_view
    description =
    "",  
    std::string_view
    unit = "")  
noexcept  
override

inline virtual std::shared_ptr<ObservableInstrument> CreateInt64ObservableUpDownCounter(std::string_view
    name,
    std::string_view
    description =
    "",  
    std::string_view
    unit = "")  
noexcept  
override
```

Creates a Asynchronous (Observable) *UpDownCounter* with the passed characteristics and returns a shared_ptr to that Observable *UpDownCounter*

Parameters

- **name** – the name of the new Observable *UpDownCounter*.

- **description** – a brief description of what the Observable *UpDownCounter* is used for.
- **unit** – the unit of metric values following <https://unitsofmeasure.org/ucum.html>.

```
inline virtual std::shared_ptr<ObservableInstrument> CreateDoubleObservableUpDownCounter(std::string_view
                                         name,
                                         std::string_view
                                         de-
                                         scrip-
                                         tion =
                                         "",
                                         std::string_view
                                         unit =
                                         "")  
noexcept
override
```

Class NoopMeterProvider

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::MeterProvider (*Class MeterProvider*)

Class Documentation

class **NoopMeterProvider** : public opentelemetry::metrics::*MeterProvider*

No-op implementation of a *MeterProvider*.

Public Functions

inline **NoopMeterProvider()**

```
inline virtual std::shared_ptr<Meter> GetMeter(std::string_view, std::string_view, std::string_view)
                                               noexcept override
```

Gets or creates a named *Meter* instance.

Optionally a version can be passed to create a named and versioned *Meter* instance.

Class NoopObservableInstrument

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::ObservableInstrument

Class Documentation

```
class NoopObservableInstrument : public opentelemetry::metrics::ObservableInstrument
```

Public Functions

```
inline NoopObservableInstrument(nstd::string_view, nstd::string_view, nstd::string_view) noexcept  
inline void AddCallback(ObservableCallbackPtr, void*) noexcept override  
inline void RemoveCallback(ObservableCallbackPtr, void*) noexcept override
```

Template Class NoopUpDownCounter

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::UpDownCounter< T > (*Template Class UpDownCounter*)

Class Documentation

```
template<class T>
```

```
class NoopUpDownCounter : public opentelemetry::metrics::UpDownCounter<T>
```

Public Functions

```
inline NoopUpDownCounter(nostd::string_view, nostd::string_view, nostd::string_view) noexcept  
~NoopUpDownCounter() override = default  
inline void Add(T) noexcept override  
inline void Add(T, const opentelemetry::context::Context&) noexcept override  
inline void Add(T, const common::KeyValueIterable&) noexcept override  
inline void Add(T, const common::KeyValueIterable&, const opentelemetry::context::Context&) noexcept  
override
```

Class ObservableInstrument

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_async_instruments.h

Inheritance Relationships

Derived Types

- public opentelemetry::metrics::NoopObservableInstrument (*Class NoopObservableInstrument*)
- public opentelemetry::sdk::metrics::ObservableInstrument (*Class ObservableInstrument*)

Class Documentation

class ObservableInstrument

Subclassed by *opentelemetry::metrics::NoopObservableInstrument*, *opentelemetry::sdk::metrics::ObservableInstrument*

Public Functions

```
ObservableInstrument() = default  
virtual ~ObservableInstrument() = default  
virtual void AddCallback(ObservableCallbackPtr, void *state) noexcept = 0  
Sets up a function that will be called whenever a metric collection is initiated.  
virtual void RemoveCallback(ObservableCallbackPtr, void *state) noexcept = 0  
Remove a function that was configured to be called whenever a metric collection is initiated.
```

Template Class `ObserverResultT`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_observer_result.h

Inheritance Relationships

Derived Type

- public `opentelemetry::sdk::metrics::ObserverResultT< T >` (*Template Class ObserverResultT*)

Class Documentation

template<class `T`>

class `ObserverResultT`

ObserverResultT class is necessary for the callback recording asynchronous instrument use.

Subclassed by `opentelemetry::sdk::metrics::ObserverResultT< T >`

Public Functions

`virtual ~ObserverResultT() = default`

`virtual void Observe(T value) noexcept = 0`

`virtual void Observe(T value, const common::KeyValueIterable &attributes) noexcept = 0`

template<class `U`, `std::enable_if_t<common::detail::is_key_value_iterable<U>::value>* = nullptr>
inline void Observe(T value, const U &attributes) noexcept`

inline void `Observe(T value, std::initializer_list<std::pair<const string_view, common::AttributeValue>> attributes)` noexcept

Class Provider

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_provider.h

Class Documentation

class `Provider`

Stores the singleton global `MeterProvider`.

Public Static Functions

```
static inline std::shared_ptr<MeterProvider> GetMeterProvider() noexcept
```

Returns the singleton *MeterProvider*.

By default, a no-op *MeterProvider* is returned. This will never return a nullptr *MeterProvider*.

```
static inline void SetMeterProvider(std::shared_ptr<MeterProvider> tp) noexcept
```

Changes the singleton *MeterProvider*.

Class SynchronousInstrument

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_sync_instruments.h

Inheritance Relationships

Derived Types

- public opentelemetry::metrics::Counter< double > (*Template Class Counter*)
- public opentelemetry::metrics::Histogram< double > (*Template Class Histogram*)
- public opentelemetry::metrics::Counter< T > (*Template Class Counter*)
- public opentelemetry::metrics::Histogram< T > (*Template Class Histogram*)
- public opentelemetry::metrics::UpDownCounter< T > (*Template Class UpDownCounter*)
- public opentelemetry::metrics::UpDownCounter< double > (*Template Class UpDownCounter*)
- public opentelemetry::metrics::UpDownCounter< int64_t > (*Template Class UpDownCounter*)

Class Documentation

class SynchronousInstrument

Subclassed by *opentelemetry::metrics::Counter< double >*, *opentelemetry::metrics::Histogram< double >*, *opentelemetry::metrics::Counter< T >*, *opentelemetry::metrics::Histogram< T >*, *opentelemetry::metrics::UpDownCounter< T >*, *opentelemetry::metrics::UpDownCounter< double >*, *opentelemetry::metrics::UpDownCounter< int64_t >*

Public Functions

```
SynchronousInstrument() = default
```

```
virtual ~SynchronousInstrument() = default
```

Template Class UpDownCounter

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_metrics_sync_instruments.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::SynchronousInstrument

Derived Type

- public opentelemetry::metrics::NoopUpDownCounter< T > (*Template Class NoopUpDownCounter*)

Class Documentation

```
template<class T>

class UpDownCounter : public opentelemetry::metrics::SynchronousInstrument
    An up-down-counter instrument that adds or reduce values.
    Subclassed by opentelemetry::metrics::NoopUpDownCounter< T >
```

Public Functions

virtual void **Add**(*T* value) noexcept = 0

 Adds a value.

Parameters **value** – The amount of the measurement.

virtual void **Add**(*T* value, const opentelemetry::context::Context &context) noexcept = 0

virtual void **Add**(*T* value, const common::KeyValueIterable &attributes) noexcept = 0

 Add a value with a set of attributes.

Parameters

- **value** – The increment amount. May be positive, negative or zero.
- **attributes** – A set of attributes to associate with the count.

virtual void **Add**(*T* value, const common::KeyValueIterable &attributes, const opentelemetry::context::Context &context) noexcept = 0

```
template<class U, std::enable_if_t<common::detail::is_key_value_iterable<U>::value>*> = nullptr>
inline void Add(T value, const U &attributes) noexcept
```

```
template<class U, std::enable_if_t<common::detail::is_key_value_iterable<U>::value>*> = nullptr>
inline void Add(T value, const U &attributes, const opentelemetry::context::Context &context) noexcept
```

```
inline void Add(T value, std::initializer_list<std::pair<std::string_view, common::AttributeValue>>
    attributes) noexcept
```

```
inline void Add(T value, std::initializer_list<std::pair<nostd::string_view, common::AttributeValue>>
    attributes, const opentelemetry::context::Context &context) noexcept
```

Class InstrumentationScope

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_instrumentationscope_instrumentation_scope.h

Class Documentation

```
class InstrumentationScope
```

Public Functions

InstrumentationScope(const *InstrumentationScope*&) = default

inline std::size_t **HashCode**() const noexcept

inline bool **operator==**(const *InstrumentationScope* &other) const
Compare 2 instrumentation libraries.

Parameters **other** – the instrumentation scope to compare to.

Returns true if the 2 instrumentation libraries are equal, false otherwise.

inline bool **equal**(const nostd::string_view name, const nostd::string_view version, const nostd::string_view
schema_url = "") const

Check whether the instrumentation scope has given name and version. This could be used to check version
equality and avoid heap allocation.

Parameters

- **name** – name of the instrumentation scope to compare.
- **version** – version of the instrumentation scope to compare.
- **schema_url** – schema url of the telemetry emitted by the scope.

Returns true if name and version in this instrumentation scope are equal with the given name
and version.

inline const std::string &**GetName**() const

inline const std::string &**GetVersion**() const

inline const std::string &**GetSchemaURL**() const

Public Static Functions

```
static inline nostd::unique_ptr<InstrumentationScope> Create(nostd::string_view name, nostd::string_view
version = "", nostd::string_view schema_url =
"")
```

Returns a newly created InstrumentationScope with the specified library name and version.

Parameters

- **name** – name of the instrumentation scope.
- **version** – version of the instrumentation scope.
- **schema_url** – schema url of the telemetry emitted by the library.

Returns the newly created InstrumentationScope.

Class Aggregation

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_aggregation_aggregation.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::metrics::DoubleHistogramAggregation (*Class DoubleHistogramAggregation*)
- public opentelemetry::sdk::metrics::DoubleLastValueAggregation (*Class DoubleLastValueAggregation*)
- public opentelemetry::sdk::metrics::DoubleSumAggregation (*Class DoubleSumAggregation*)
- public opentelemetry::sdk::metrics::DropAggregation (*Class DropAggregation*)
- public opentelemetry::sdk::metrics::LongHistogramAggregation (*Class LongHistogramAggregation*)
- public opentelemetry::sdk::metrics::LongLastValueAggregation (*Class LongLastValueAggregation*)
- public opentelemetry::sdk::metrics::LongSumAggregation (*Class LongSumAggregation*)

Class Documentation

class Aggregation

Subclassed by opentelemetry::sdk::metrics::DoubleHistogramAggregation, opentelemetry::sdk::metrics::DoubleLastValueAggregation, opentelemetry::sdk::metrics::DoubleSumAggregation, opentelemetry::sdk::metrics::DropAggregation, opentelemetry::sdk::metrics::LongHistogramAggregation, opentelemetry::sdk::metrics::LongLastValueAggregation, opentelemetry::sdk::metrics::LongSumAggregation

Public Functions

virtual void **Aggregate**(int64_t value, const *PointAttributes* &attributes = { }) noexcept = 0

virtual void **Aggregate**(double value, const *PointAttributes* &attributes = { }) noexcept = 0

virtual std::unique_ptr<*Aggregation*> **Merge**(const *Aggregation* &delta) const noexcept = 0

Returns the result of the merge of the two aggregations.

This should always assume that the aggregations do not overlap and merge together for a new cumulative report.

Parameters **delta** – the newly captured (delta) aggregation

Returns the result of the merge of the given aggregation.

virtual std::unique_ptr<*Aggregation*> **Diff**(const *Aggregation* &next) const noexcept = 0

Returns a new delta aggregation by comparing two cumulative measurements.

Parameters **next** – the newly captured (cumulative) aggregation.

Returns The resulting delta aggregation.

virtual *PointType* **ToPoint**() const noexcept = 0

Returns the point data that the aggregation will produce.

Returns *PointType*

virtual ~**Aggregation**() = default

Class AggregationConfig

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_aggregation_config.h

Inheritance Relationships

Derived Type

- public opentelemetry::sdk::metrics::HistogramAggregationConfig (*Class HistogramAggregationConfig*)

Class Documentation

class AggregationConfig

Subclassed by *opentelemetry::sdk::metrics::HistogramAggregationConfig*

Public Functions

```
virtual ~AggregationConfig() = default
```

Class AlwaysSampleFilter

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-

- public opentelemetry::sdk::metrics::*AsyncMultiMetricStorage* (*Class AsyncMultiMetricStorage*)
- public opentelemetry::sdk::metrics::*NoopAsyncWritableMetricStorage* (*Class NoopAsyncWritableMetricStorage*)

Class Documentation

class *AsyncWritableMetricStorage*

Subclassed by opentelemetry::sdk::metrics::*AsyncMetricStorage*, opentelemetry::sdk::metrics::*AsyncMultiMetricStorage*, opentelemetry::sdk::metrics::*NoopAsyncWritableMetricStorage*

Public Functions

```
AsyncWritableMetricStorage() = default
virtual ~AsyncWritableMetricStorage() = default
virtual void RecordLong(const std::unordered_map<MetricAttributes, int64_t, AttributeHashGenerator>
                        &measurements, opentelemetry::common::SystemTimestamp observation_time)
                        noexcept = 0
virtual void RecordDouble(const std::unordered_map<MetricAttributes, double, AttributeHashGenerator>
                           &measurements, opentelemetry::common::SystemTimestamp observation_time)
                           noexcept = 0
```

Class AttributeHashGenerator

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_attributes_hashmap.h

Class Documentation

```
class AttributeHashGenerator
```

Public Functions

```
inline size_t operator()(const MetricAttributes &attributes) const
```

Class AttributesHashMap

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_attributes_hashmap.h

Class Documentation

```
class AttributesHashMap
```

Public Functions

```
inline Aggregation *Get(const MetricAttributes &attributes) const
```

```
inline bool Has(const MetricAttributes &attributes) const
```

Returns check if key is present in hash

```
inline Aggregation *GetOrSetDefault(const MetricAttributes &attributes,  
                                    std::function<std::unique_ptr<Aggregation>()> aggregation_callback)
```

Returns the pointer to value for given key if present. If not present, it uses the provided callback to generate value and store in the hash

```
inline void Set(const MetricAttributes &attributes, std::unique_ptr<Aggregation> value)
```

Set the value for given key, overwriting the value if already present

```
inline bool GetAllEntries(std::function<bool(const MetricAttributes&, Aggregation&)> callback)  
const
```

Iterate the hash to yield key and value stored in hash.

```
inline size_t Size()
```

Return the size of hash.

Class AttributesProcessor

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_view_attributes_processor.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::metrics::DefaultAttributesProcessor (*Class DefaultAttributesProcessor*)
- public opentelemetry::sdk::metrics::FilteringAttributesProcessor (*Class FilteringAttributesProcessor*)

Class Documentation

class AttributesProcessor

The *AttributesProcessor* is responsible for customizing which attribute(s) are to be reported as metrics dimension(s).

Subclassed by *opentelemetry::sdk::metrics::DefaultAttributesProcessor*, *opentelemetry::sdk::metrics::FilteringAttributesProcessor*

Public Functions

```
virtual MetricAttributes process(const opentelemetry::common::KeyValueIterable &attributes) const  
noexcept = 0  
  
virtual ~AttributesProcessor() = default
```

Class CollectorHandle

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_metric_collector.h

Inheritance Relationships

Derived Type

- public opentelemetry::sdk::metrics::MetricCollector (*Class MetricCollector*)

Class Documentation

class **CollectorHandle**

Subclassed by *opentelemetry::sdk::metrics::MetricCollector*

Public Functions

CollectorHandle() = default

virtual ~CollectorHandle() = default

Class Documentation

class **ExactPredicate** : public opentelemetry::sdk::metrics::*Predicate*

Public Functions

inline **ExactPredicate**(opentelemetry::nstd::string_view pattern)

inline bool **Match**(opentelemetry::nstd::string_view str) const noexcept override

Class ExemplarData

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_data_exemplar_data.h

Class Documentation

class **ExemplarData**

A sample input measurement.

Exemplars also hold information about the environment when the measurement was recorded, for example the span and trace ID of the active span when the exemplar was recorded.

Public Functions

inline *MetricAttributes* **GetFilteredAttributes**()

The set of key/value pairs that were filtered out by the aggregator, but recorded alongside the original measurement. Only key/value pairs that were filtered out by the aggregator should be included

inline opentelemetry::common::*SystemTimestamp* **GetEpochNanos**()

Returns the timestamp in nanos when measurement was collected.

inline const trace::SpanContext &**GetSpanContext**() const noexcept

Returns the SpanContext associated with this exemplar. If the exemplar was not recorded inside a sampled trace, the Context will be invalid.

Public Static Functions

static inline *ExemplarData* **Create**(std::shared_ptr<trace::SpanContext> context, const
opentelemetry::common::*SystemTimestamp* ×tamp, const
PointDataAttributes &point_data_attr)

static inline *PointType* **CreateSumPointData**(*ValueType* value)

static inline *PointType* **CreateLastValuePointData**(*ValueType* value)

static inline *PointType* **CreateDropPointData**()

Class ExemplarFilter

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_exemplar_filter.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::metrics::AlwaysSampleFilter (*Class AlwaysSampleFilter*)
- public opentelemetry::sdk::metrics::NeverSampleFilter (*Class NeverSampleFilter*)
- public opentelemetry::sdk::metrics::WithTraceSampleFilter (*Class WithTraceSampleFilter*)

Class Documentation

class ExemplarFilter

Exemplar filters are used to pre-filter measurements before attempting to store them in a reservoir.

Subclassed by *opentelemetry::sdk::metrics::AlwaysSampleFilter*, *opentelemetry::sdk::metrics::NeverSampleFilter*, *opentelemetry::sdk::metrics::WithTraceSampleFilter*

Public Functions

```
virtual bool ShouldSampleMeasurement(int64_t value, const MetricAttributes &attributes, const opentelemetry::context::Context &context) noexcept = 0
```

```
virtual bool ShouldSampleMeasurement(double value, const MetricAttributes &attributes, const opentelemetry::context::Context &context) noexcept = 0
```

```
virtual ~ExemplarFilter() = default
```

Public Static Functions

```
static std::shared_ptr<ExemplarFilter> GetNeverSampleFilter() noexcept
```

```
static std::shared_ptr<ExemplarFilter> GetAlwaysSampleFilter() noexcept
```

```
static std::shared_ptr<ExemplarFilter> GetWithTraceSampleFilter() noexcept
```

Class ExemplarReservoir

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_exemplar_reservoir.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::metrics::FilteredExemplarReservoir (*Class FilteredExemplarReservoir*)
- public opentelemetry::sdk::metrics::FixedSizeExemplarReservoir (*Class FixedSizeExemplarReservoir*)
- public opentelemetry::sdk::metrics::NoExemplarReservoir (*Class NoExemplarReservoir*)

Class Documentation

class ExemplarReservoir

An interface for an exemplar reservoir of samples.

This represents a reservoir for a specific “point” of metric data.

Subclassed by *opentelemetry::sdk::metrics::FilteredExemplarReservoir*, *opentelemetry::sdk::metrics::FixedSizeExemplarReservoir*, *opentelemetry::sdk::metrics::NoExemplarReservoir*

Public Functions

`virtual ~ExemplarReservoir() = default`

`virtual void OfferMeasurement(int64_t value, const MetricAttributes &attributes, const opentelemetry::context::Context &context, const opentelemetry::common::SystemTimestamp ×tamp) noexcept = 0`

Offers a long measurement to be sampled.

`virtual void OfferMeasurement(double value, const MetricAttributes &attributes, const opentelemetry::context::Context &context, const opentelemetry::common::SystemTimestamp ×tamp) noexcept = 0`

Offers a double measurement to be sampled.

`virtual std::vector<std::shared_ptr<ExemplarData>> CollectAndReset(const MetricAttributes &pointAttributes) noexcept = 0`

Builds vector of Exemplars for exporting from the current reservoir.

Additionally, clears the reservoir for the next sampling period.

Parameters `pointAttributes` – the Attributes associated with the metric point. Exemplar Data should filter these out of their final data state.

Returns A vector of sampled exemplars for this point. Implementers are expected to filter out pointAttributes from the original recorded attributes.

Public Static Functions

```
static nostd::shared_ptr<ExemplarReservoir> GetFilteredExemplarReservoir(std::shared_ptr<ExemplarFilter>
    filter,
    std::shared_ptr<ExemplarReservoir>
    reservoir)

static nostd::shared_ptr<ExemplarReservoir> GetHistogramExemplarReservoir(size_t size,
    std::shared_ptr<ReservoirCellSelector>
    reservoir_cell_selector,
    std::shared_ptr<ExemplarData>
    (ReservoirCell::*
    map_and_reset_cell)(const
    com-
    mon::OrderedAttributeMap
    &attributes))

static nostd::shared_ptr<ExemplarReservoir> GetNoExemplarReservoir()
```

Class FilteredExemplarReservoir

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_exemplar_filtered_exemplar_reservoir.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::metrics::*ExemplarReservoir* (*Class ExemplarReservoir*)

Class Documentation

```
class FilteredExemplarReservoir : public opentelemetry::sdk::metrics::ExemplarReservoir
```

Public Functions

```
inline FilteredExemplarReservoir(std::shared_ptr<ExemplarFilter> filter,
    std::shared_ptr<ExemplarReservoir> reservoir)

inline void OfferMeasurement(int64_t value, const MetricAttributes &attributes, const
    opentelemetry::context::Context &context, const
    opentelemetry::common::SystemTimestamp &timestamp) noexcept override

inline void OfferMeasurement(double value, const MetricAttributes &attributes, const
    opentelemetry::context::Context &context, const
    opentelemetry::common::SystemTimestamp &timestamp) noexcept override

```

inline const sdk::instrumentationscope::InstrumentationScope *GetInstrumentationLibrary() const noexcept

```

```

std::vector<MetricData> Collect(CollectorHandle *collector, opentelemetry::common::SystemTimestamp
collect_ts) noexcept

```

collect metrics across all the instruments configured for the meter

Class MeterContext

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_meter_context.h

Inheritance Relationships

Base Type

- public std::enable_shared_from_this< MeterContext >

Class Documentation

class **MeterContext** : public std::enable_shared_from_this<*MeterContext*>

A class which stores the MeterProvider context.

Public Functions

MeterContext(std::unique_ptr<*ViewRegistry*> **views** = std::unique_ptr<*ViewRegistry*>(new *ViewRegistry*()),
opentelemetry::sdk::resource::*Resource* **resource** =
opentelemetry::sdk::resource::*Resource*::*Create*({})) noexcept

Initialize a new meter provider

Parameters

- readers** – The readers to be configured with meter context.
- views** – The views to be configured with meter context.
- resource** – The resource for this meter context.

const opentelemetry::sdk::resource::*Resource* &**GetResource**() const noexcept

Obtain the resource associated with this meter context.

Returns The resource for this meter context

ViewRegistry ***GetViewRegistry**() const noexcept

Obtain the *View* Registry configured

Returns The reference to view registry

bool **ForEachMeter**(nstd::function_ref<bool(std::shared_ptr<*Meter*> &meter)> callback) noexcept

NOTE - INTERNAL method, can change in future. Process callback for each meter in thread-safe manner

nstd::span<std::shared_ptr<*Meter*>> **GetMeters**() noexcept

NOTE - INTERNAL method, can change in future. Get the configured meters. This method is NOT thread safe, and only called through MeterProvider

nstd::span<std::shared_ptr<*CollectorHandle*>> **GetCollectors**() noexcept

Obtain the configured collectors.

```
opentelemetry::common::SystemTimestamp GetSDKStartTime() noexcept
```

GET SDK Start time

```
void AddMetricReader(std::shared_ptr<MetricReader> reader) noexcept
```

Attaches a metric reader to list of configured readers for this Meter context.

Note: This reader may not receive any in-flight meter data, but will get newly created meter data. Note: This method is not thread safe, and should ideally be called from main thread.

Parameters **reader** – The metric reader for this meter context. This must not be a nullptr.

```
void AddView(std::unique_ptr<InstrumentSelector> instrument_selector, std::unique_ptr<MeterSelector> meter_selector, std::unique_ptr<View> view) noexcept
```

Attaches a *View* to list of configured Views for this Meter context.

Note: This view may not receive any in-flight meter data, but will get newly created meter data. Note: This method is not thread safe, and should ideally be called from main thread.

Parameters **view** – The Views for this meter context. This must not be a nullptr.

```
void AddMeter(std::shared_ptr<Meter> meter)
```

NOTE - INTERNAL method, can change in future. Adds a meter to the list of configured meters in thread safe manner.

Parameters **meter** –

```
bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max)()) noexcept
```

Force all active Collectors to flush any buffered meter data within the given timeout.

```
bool Shutdown() noexcept
```

Shutdown the Collectors associated with this meter provider.

Class MeterProvider

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_meter_provider.h

Inheritance Relationships

Base Type

- public opentelemetry::metrics::MeterProvider (*Class MeterProvider*)

Class Documentation

```
class MeterProvider : public opentelemetry::metrics::MeterProvider
```

Public Functions

```
MeterProvider(std::unique_ptr<ViewRegistry> views = std::unique_ptr<ViewRegistry>(new ViewRegistry()), sdk::resource::Resource resource = sdk::resource::Resource::Create({})) noexcept
```

Initialize a new meter provider

Parameters

- **views** – The views for this meter provider
- **resource** – The resources for this meter provider.

```
explicit MeterProvider(std::shared_ptr<sdk::metrics::MeterContext> context) noexcept
```

Initialize a new meter provider with a specified context

Parameters **context** – The shared meter configuration/pipeline for this provider.

```
nostd::shared_ptr<opentelemetry::metrics::Meter> GetMeter(nostd::string_view name, nostd::string_view version = "", nostd::string_view schema_url = "") noexcept override
```

```
const sdk::resource::Resource &GetResource() const noexcept
```

Obtain the resource associated with this meter provider.

Returns The resource for this meter provider.

```
void AddMetricReader(std::shared_ptr<MetricReader> reader) noexcept
```

Attaches a metric reader to list of configured readers for this Meter providers.

Note: This reader may not receive any in-flight meter data, but will get newly created meter data. Note: This method is not thread safe, and should ideally be called from main thread.

Parameters **reader** – The metric reader for this meter provider. This must not be a nullptr.

```
void AddView(std::unique_ptr<InstrumentSelector> instrument_selector, std::unique_ptr<MeterSelector> meter_selector, std::unique_ptr<View> view) noexcept
```

Attaches a *View* to list of configured Views for this Meter provider.

Note: This view may not receive any in-flight meter data, but will get newly created meter data. Note: This method is not thread safe, and should ideally be called from main thread.

Parameters **view** – The Views for this meter provider. This must not be a nullptr.

```
bool Shutdown() noexcept
```

Shutdown the meter provider.

```
bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max())) noexcept
```

Force flush the meter provider.

```
~MeterProvider() override
```

Class MeterSelector

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_view_meter_selector.h

Class Documentation

```
class MeterSelector
```

Public Functions

```
inline MeterSelector(opentelemetry::nstd::string_view name, opentelemetry::nstd::string_view version,  
                     opentelemetry::nstd::string_view schema)  
  
inline const opentelemetry::sdk::metrics::Predicate *GetNameFilter() const  
  
inline const opentelemetry::sdk::metrics::Predicate *GetVersionFilter() const  
  
inline const opentelemetry::sdk::metrics::Predicate *GetSchemaFilter() const
```

Class MetricCollector

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_metric_collector.h

Inheritance Relationships

Base Types

- public opentelemetry::sdk::metrics::MetricProducer (*Class MetricProducer*)
- public opentelemetry::sdk::metrics::CollectorHandle

Class Documentation

```
class MetricCollector : public opentelemetry::sdk::metrics::MetricProducer, public  
opentelemetry::sdk::metrics::CollectorHandle
```

An internal opaque interface that the *MetricReader* receives as *MetricProducer*. It acts as the storage key to the internal metric stream state for each *MetricReader*.

Public Functions

```
MetricCollector(MeterContext *context, std::shared_ptr<MetricReader> metric_reader)
```

```
~MetricCollector() override = default
```

```
AggregationTemporality GetAggregationTemporality(InstrumentType instrument_type) noexcept override
```

```
virtual bool Collect(std::function_ref<bool(ResourceMetrics &metric_data)> callback) noexcept override
```

The callback to be called for each metric exporter. This will only be those metrics that have been produced since the last time this method was called.

Returns a status of completion of method.

```
bool ForceFlush(std::chrono::microseconds timeout = std::chrono::microseconds::max()) noexcept
```

```
bool Shutdown(std::chrono::microseconds timeout = std::chrono::microseconds::max()) noexcept
```

Class MetricData

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_data_metric_data.h

Class Documentation

```
class MetricData
```

Class MetricProducer

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_export_metric_producer.h

Inheritance Relationships

Derived Type

- public `opentelemetry::sdk::metrics::MetricCollector` (*Class MetricCollector*)

Class Documentation

class MetricProducer

MetricProducer is the interface that is used to make metric data available to the OpenTelemetry exporters. Implementations should be stateful, in that each call to `Collect` will return any metric generated since the last call was made.

Implementations must be thread-safe.

Subclassed by `opentelemetry::sdk::metrics::MetricCollector`

Public Functions

`MetricProducer()` = default

`virtual ~MetricProducer()` = default

`virtual bool Collect(nostd::function_ref<bool(ResourceMetrics &metric_data)> callback)` noexcept = 0

The callback to be called for each metric exporter. This will only be those metrics that have been produced since the last time this method was called.

Returns a status of completion of method.

Class MetricReader

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_metric_reader.h

Inheritance Relationships

Derived Type

- public `opentelemetry::sdk::metrics::PeriodicExportingMetricReader` (*Class PeriodicExportingMetricReader*)

Class Documentation

class MetricReader

MetricReader defines the interface to collect metrics from SDK

Subclassed by *opentelemetry::sdk::metrics::PeriodicExportingMetricReader*

Public Functions

MetricReader()

void **SetMetricProducer**(*MetricProducer* *metric_producer)

bool **Collect**(*nostd::function_ref<bool(ResourceMetrics &metric_data)>* callback) noexcept

Collect the metrics from SDK.

Returns return the status of the operation.

virtual *AggregationTemporality* **GetAggregationTemporality**(*InstrumentType* instrument_type) const noexcept = 0

Get the AggregationTemporality for given Instrument Type for this reader.

Returns AggregationTemporality

bool **Shutdown**(*std::chrono::microseconds* timeout = *std::chrono::microseconds::max()*) noexcept

Shutdown the meter reader.

bool **ForceFlush**(*std::chrono::microseconds* timeout = *std::chrono::microseconds::max()*) noexcept

Force flush the metric read by the reader.

virtual ~**MetricReader**() = default

Protected Functions

bool **IsShutdown**() const noexcept

Class MetricStorage

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_metric_storage.h

Inheritance Relationships

Derived Types

- public *opentelemetry::sdk::metrics::AsyncMetricStorage* (*Class AsyncMetricStorage*)
- public *opentelemetry::sdk::metrics::NoopMetricStorage* (*Class NoopMetricStorage*)
- public *opentelemetry::sdk::metrics::SyncMetricStorage* (*Class SyncMetricStorage*)

Class Documentation

class MetricStorage

Subclassed by *opentelemetry::sdk::metrics::AsyncMetricStorage*, *opentelemetry::sdk::metrics::NoopMetricStorage*, *opentelemetry::sdk::metrics::SyncMetricStorage*

Public Functions

MetricStorage() = default

virtual ~MetricStorage() = default

virtual bool Collect(CollectorHandle *collector, std::span<std::shared_ptr<CollectorHandle>> collectors, opentelemetry::common::SystemTimestamp sdk_start_ts, opentelemetry::common::SystemTimestamp collection_ts, std::function_ref<bool(MetricData)> callback) noexcept = 0

Class NeverSampleFilter

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_exemplar_never_sample_filter.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::metrics::ExemplarFilter (*Class ExemplarFilter*)

Class Documentation

class NeverSampleFilter : public opentelemetry::sdk::metrics::ExemplarFilter

Public Functions

inline bool ShouldSampleMeasurement(int64_t, const MetricAttributes&, const opentelemetry::context::Context&) noexcept override

inline bool ShouldSampleMeasurement(double, const MetricAttributes&, const opentelemetry::context::Context&) noexcept override

explicit NeverSampleFilter() = default

Class Documentation

```
class PatternPredicate : public opentelemetry::sdk::metrics::Predicate
```

Public Functions

```
inline PatternPredicate(opentelemetry::nstd::string_view pattern)
inline bool Match(opentelemetry::nstd::string_view str) const noexcept override
```

Class PeriodicExportingMetricReader

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_export_periodic_exporting_metric_reader.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::metrics::MetricReader (*Class MetricReader*)

Class Documentation

```
class PeriodicExportingMetricReader : public opentelemetry::sdk::metrics::MetricReader
```

Public Functions

```
PeriodicExportingMetricReader(std::unique_ptr<PushMetricExporter> exporter, const  
                             PeriodicExportingMetricReaderOptions &option)
```

```
AggregationTemporality GetAggregationTemporality(InstrumentType instrument_type) const noexcept  
override
```

Class Predicate

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
 cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_view_predicate.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::metrics::ExactPredicate (*Class ExactPredicate*)
- public opentelemetry::sdk::metrics::MatchEverythingPattern (*Class MatchEverythingPattern*)
- public opentelemetry::sdk::metrics::MatchNothingPattern (*Class MatchNothingPattern*)
- public opentelemetry::sdk::metrics::PatternPredicate (*Class PatternPredicate*)

Class Documentation

```
class Predicate
```

Subclassed by *opentelemetry::sdk::metrics::ExactPredicate*, *opentelemetry::sdk::metrics::MatchEverythingPattern*,
opentelemetry::sdk::metrics::MatchNothingPattern, *opentelemetry::sdk::metrics::PatternPredicate*

Public Functions

```
virtual ~Predicate() = default  
virtual bool Match(opentelemetry::nostd::string_view string) const noexcept = 0
```

Class PredicateFactory

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_view_predicate_factory.h

Class Documentation

class **PredicateFactory**

Public Static Functions

```
static inline std::unique_ptr<Predicate> GetPredicate(opentelemetry::nostd::string_view pattern,  
PredicateType type)
```

Class PushMetricExporter

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_push_metric_exporter.h

Class Documentation

class **PushMetricExporter**

PushMetricExporter defines the interface to be used by metrics libraries to push metrics data to the OpenTelemetry exporters.

Public Functions

```
virtual ~PushMetricExporter() = default  
virtual opentelemetry::sdk::common::ExportResult Export(const ResourceMetrics &data) noexcept = 0
```

Exports a batch of metrics data. This method must not be called concurrently for the same exporter instance.

Parameters **data** – metrics data

```
virtual AggregationTemporality GetAggregationTemporality(InstrumentType instrument_type) const  
noexcept = 0
```

Get the AggregationTemporality for given Instrument Type for this exporter.

Returns AggregationTemporality

```
virtual bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max)() noexcept
= 0
```

Force flush the exporter.

```
virtual bool Shutdown(std::chrono::microseconds timeout = std::chrono::microseconds(0)) noexcept = 0
```

Shut down the metric exporter.

Parameters `timeout` – an optional timeout.

Returns return the status of the operation.

Class ReservoirCell

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_exemplar_reservoir_cell.h

Class Documentation

class ReservoirCell

A Reservoir cell pre-allocated memories for Exemplar data.

Public Functions

```
ReservoirCell() = default
```

```
inline void RecordLongMeasurement(int64_t value, const MetricAttributes &attributes, const opentelemetry::context::Context &context)
```

Record the long measurement to the cell.

```
inline void RecordDoubleMeasurement(double value, const MetricAttributes &attributes, const opentelemetry::context::Context &context)
```

Record the long measurement to the cell.

```
inline std::shared_ptr<ExemplarData> GetAndResetLong(const MetricAttributes &point_attributes)
```

Retrieve the cell's *ExemplarData*.

Must be used in tandem with recordLongMeasurement(int64_t, Attributes, Context).

```
inline std::shared_ptr<ExemplarData> GetAndResetDouble(const MetricAttributes &point_attributes)
```

Retrieve the cell's *ExemplarData*.

Must be used in tandem with recordDoubleMeasurement(double, Attributes, Context).

```
inline void reset()
```

Class SumPointData

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_data_point_data.h

Class Documentation

```
class SumPointData
```

Public Functions

```
SumPointData(SumPointData&&) = default  
SumPointData(const SumPointData&) = default  
SumPointData &operator=(SumPointData&&) = default  
SumPointData() = default
```

Public Members

```
ValueType value_ = {}
```

```
bool is_monotonic_ = true
```

Class Synchronous

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_sync_instruments.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::metrics::DoubleCounter (*Class DoubleCounter*)
- public opentelemetry::sdk::metrics::DoubleHistogram (*Class DoubleHistogram*)
- public opentelemetry::sdk::metrics::DoubleUpDownCounter (*Class DoubleUpDownCounter*)
- public opentelemetry::sdk::metrics::LongCounter< T > (*Template Class LongCounter*)
- public opentelemetry::sdk::metrics::LongHistogram< T > (*Template Class LongHistogram*)
- public opentelemetry::sdk::metrics::LongUpDownCounter (*Class LongUpDownCounter*)

Class Documentation

class **Synchronous**

Subclassed by `opentelemetry::sdk::metrics::DoubleCounter`, `opentelemetry::sdk::metrics::DoubleHistogram`, `opentelemetry::sdk::metrics::DoubleUpDownCounter`, `opentelemetry::sdk::metrics::LongCounter< T >`, `opentelemetry::sdk::metrics::LongHistogram< T >`, `opentelemetry::sdk::metrics::LongUpDownCounter`

Public Functions

```
inline Synchronous(InstrumentDescriptor instrument_descriptor,  
                    std::unique_ptr<SyncWritableMetricStorage> storage)
```

Protected Attributes

InstrumentDescriptor **instrument_descriptor_**

std::unique_ptr<*SyncWritableMetricStorage*> **storage_**

Class **SyncMetricStorage**

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_sync_metric_storage.h

Inheritance Relationships

Base Types

- public `opentelemetry::sdk::metrics::MetricStorage`
- public `opentelemetry::sdk::metrics::SyncWritableMetricStorage`

Class Documentation

class **SyncMetricStorage** : public `opentelemetry::sdk::metrics::MetricStorage`, public
`opentelemetry::sdk::metrics::SyncWritableMetricStorage`

Public Functions

```
inline SyncMetricStorage(InstrumentDescriptor instrument_descriptor, const AggregationType
    aggregation_type, const AttributesProcessor *attributes_processor,
    nostd::shared_ptr<ExemplarReservoir> &&exemplar_reservoir, const
    AggregationConfig *aggregation_config)

virtual ~SyncWritableMetricStorage() = default
```

Class TemporalMetricStorage

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_state_temporal_metric_storage.h

Class Documentation

class **TemporalMetricStorage**

Public Functions

```
TemporalMetricStorage(InstrumentDescriptor instrument_descriptor, const AggregationConfig
                      *aggregation_config)

bool buildMetrics(CollectorHandle *collector, nostd::span<std::shared_ptr<CollectorHandle>> collectors,
                  opentelemetry::common::SystemTimestamp sdk_start_ts,
                  opentelemetry::common::SystemTimestamp collection_ts,
                  std::shared_ptr<AttributesHashMap> delta_metrics,
                  nostd::function_ref<bool(MetricData)> callback) noexcept
```

Class View

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_view_view.h

Class Documentation

class **View**

View defines the interface to allow SDK user to customize the metrics before exported.

Public Functions

```
inline View(const std::string &name, const std::string &description = "", AggregationType aggregation_type =
              AggregationType::kDefault, std::shared_ptr<AggregationConfig> aggregation_config = nullptr,
              std::unique_ptr<opentelemetry::sdk::metrics::AttributesProcessor> attributes_processor =
              std::unique_ptr<opentelemetry::sdk::metrics::AttributesProcessor>(new
              opentelemetry::sdk::metrics::DefaultAttributesProcessor()))

virtual ~View() = default

inline virtual std::string GetName() const noexcept

inline virtual std::string GetDescription() const noexcept

inline virtual AggregationType GetAggregationType() const noexcept

inline virtual AggregationConfig *GetAggregationConfig() const noexcept

inline virtual const opentelemetry::sdk::metrics::AttributesProcessor &GetAttributesProcessor() const
                                              noexcept
```

Class ViewRegistry

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_view_view_registry.h

Class Documentation

```
class ViewRegistry
```

Public Functions

```
inline void AddView(std::unique_ptr<opentelemetry::sdk::metrics::InstrumentSelector> instrument_selector,  
                    std::unique_ptr<opentelemetry::sdk::metrics::MeterSelector> meter_selector,  
                    std::unique_ptr<opentelemetry::sdk::metrics::View> view)  
  
inline bool FindViews(const opentelemetry::sdk::metrics::InstrumentDescriptor &instrument_descriptor,  
                      const opentelemetry::sdk::instrumentationscope::InstrumentationScope  
                      &instrumentation_scope, std::function<bool(const View&)> callback) const  
  
~ViewRegistry() = default
```

Class WithTraceSampleFilter

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_exemplar_with_trace_sample_filter.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::metrics::ExemplarFilter (*Class ExemplarFilter*)

Class Documentation

```
class WithTraceSampleFilter : public opentelemetry::sdk::metrics::ExemplarFilter
```

Public Functions

```
inline bool ShouldSampleMeasurement(int64_t, const MetricAttributes&, const  
                                     opentelemetry::context::Context &context) noexcept override  
  
inline bool ShouldSampleMeasurement(double, const MetricAttributes&, const  
                                     opentelemetry::context::Context &context) noexcept override  
  
explicit WithTraceSampleFilter() = default
```

Class OTELResourceDetector

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_resource_resource_detector.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::resource::ResourceDetector (*Class ResourceDetector*)

Class Documentation

```
class OTELResourceDetector : public opentelemetry::sdk::resource::ResourceDetector
    OTelResourceDetector to detect the presence of and create a Resource from the
    OTEL_RESOURCE_ATTRIBUTES environment variable.
```

Public Functions

```
virtual Resource Detect() noexcept override
```

Class Resource

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_resource_resource.h

Class Documentation

```
class Resource
```

Public Functions

```
Resource(const Resource&) = default
const ResourceAttributes &GetAttributes() const noexcept
const std::string &GetSchemaURL() const noexcept
```

```
Resource Merge(const Resource &other) noexcept
```

Returns a new, merged Resource by merging the current Resource with the other Resource. In case of a collision, the other Resource takes precedence.

Parameters **other** – the Resource that will be merged with this.

Returns the newly merged Resource.

Public Static Functions

static *Resource* **Create**(const *ResourceAttributes* &attributes, const std::string &schema_url = std::string{})
Returns a newly created Resource with the specified attributes. It adds (merge) SDK attributes and OTEL attributes before returning.

Parameters **attributes** – for this resource

Returns the newly created Resource.

static *Resource* &**GetEmpty**()

Returns an Empty resource.

static *Resource* &**GetDefault**()

Returns a Resource that identifies the SDK in use.

Protected Functions

Resource(const *ResourceAttributes* &attributes = *ResourceAttributes*(), const std::string &schema_url = std::string{}) noexcept

The constructor is protected and only for use internally by the class and inside *ResourceDetector* class.
Users should use the Create factory method to obtain a Resource instance.

Class ResourceDetector

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_resource_resource_detector.h

Inheritance Relationships

Derived Type

- public opentelemetry::sdk::resource::OTELResourceDetector (*Class OTELResourceDetector*)

Class Documentation

class ResourceDetector

Interface for a Resource Detector

Subclassed by *opentelemetry::sdk::resource::OTELResourceDetector*

Public Functions

```
ResourceDetector() = default  
virtual ~ResourceDetector() = default  
virtual Resource Detect() = 0
```

Class AlwaysOffSampler

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_always_off.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::Sampler (*Class Sampler*)

Class Documentation

```
class AlwaysOffSampler : public opentelemetry::sdk::trace::Sampler
```

The always off sampler always returns DROP, effectively disabling tracing functionality.

Public Functions

```
inline virtual SamplingResult ShouldSample(const opentelemetry::trace::SpanContext &parent_context,  
                                             opentelemetry::trace::TraceId, const std::string_view,  
                                             opentelemetry::trace::SpanKind, const  
                                             opentelemetry::common::KeyValueIterable&, const  
                                             opentelemetry::trace::SpanContextKeyValueIterable&)  
noexcept override
```

Returns Returns DROP always

```
inline virtual std::string_view GetDescription() const noexcept override
```

Returns Description MUST be *AlwaysOffSampler*

Class AlwaysOffSamplerFactory

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_always_off_factory.h

Class Documentation

class **AlwaysOffSamplerFactory**
 Factory class for *AlwaysOffSampler*.

Public Static Functions

static std::unique_ptr<*Sampler*> **Create()**
 Create an *AlwaysOffSampler*.

Class AlwaysOnSampler

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_always_on.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::Sampler (*Class Sampler*)

Class Documentation

class **AlwaysOnSampler** : public opentelemetry::sdk::trace::*Sampler*

The always on sampler is a default sampler which always return Decision::RECORD_AND_SAMPLE

Public Functions

```
inline virtual SamplingResult ShouldSample(const opentelemetry::trace::SpanContext &parent_context,
                                             opentelemetry::trace::TraceId, nostd::string_view,
                                             opentelemetry::trace::SpanKind, const
                                             opentelemetry::common::KeyValueIterable&, const
                                             opentelemetry::trace::SpanContextKeyValueIterable&)
                                             noexcept override
```

Returns Always return Decision RECORD_AND_SAMPLE

inline virtual nostd::string_view **GetDescription**() const noexcept override

Returns Description MUST be *AlwaysOnSampler*

Class AlwaysOnSamplerFactory

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_always_on_factory.h

Class Documentation

class **AlwaysOnSamplerFactory**

Factory class for *AlwaysOnSampler*.

Public Static Functions

static std::unique_ptr<*Sampler*> **Create()**
Create an *AlwaysOnSampler*.

Class BatchSpanProcessor

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_batch_span_processor.h

Nested Relationships

Nested Types

- Struct BatchSpanProcessor::SynchronizationData*

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::SpanProcessor (*Class SpanProcessor*)

Class Documentation

class **BatchSpanProcessor** : public opentelemetry::sdk::trace::SpanProcessor

This is an implementation of the *SpanProcessor* which creates batches of finished spans and passes the export-friendly span data representations to the configured *SpanExporter*.

Public Functions

BatchSpanProcessor(std::unique_ptr<*SpanExporter*> &&exporter, const *BatchSpanProcessorOptions* &options)

Creates a batch span processor by configuring the specified exporter and other parameters as per the official, language-agnostic opentelemetry specs.

Parameters

- **exporter** -- The backend exporter to pass the ended spans to.
- **options** -- The batch *SpanProcessor* options.

virtual std::unique_ptr<*Recordable*> **MakeRecordable**() noexcept override

Requests a Recordable(Span) from the configured exporter.

Returns A recordable generated by the backend exporter

virtual void **OnStart**(*Recordable* &span, const opentelemetry::trace::SpanContext &parent_context) noexcept override

Called when a span is started.

NOTE: This method is a no-op.

Parameters

- **span** -- The span that just started
- **parent_context** -- The parent context of the span that just started

virtual void **OnEnd**(std::unique_ptr<*Recordable*> &&span) noexcept override

Called when a span ends.

Parameters **span** -- A recordable for a span that just ended

virtual bool **ForceFlush**(std::chrono::microseconds timeout = std::chrono::microseconds::max()) noexcept override

Export all ended spans that have not been exported yet.

NOTE: Timeout functionality not supported yet.

virtual bool **Shutdown**(std::chrono::microseconds timeout = std::chrono::microseconds::max()) noexcept override

Shuts down the processor and does any cleanup required. Completely drains the buffer/queue of all its ended spans and passes them to the exporter. Any subsequent calls to OnStart, OnEnd, ForceFlush or Shutdown will return immediately without doing anything.

NOTE: Timeout functionality not supported yet.

~BatchSpanProcessor() override

Class destructor which invokes the *Shutdown()* method. The *Shutdown()* method is supposed to be invoked when the Tracer is shutdown (as per other languages), but the C++ Tracer only takes shared ownership of the processor, and thus doesn't call Shutdown (as the processor might be shared with other Tracers).

Protected Functions

`void DoBackgroundWork()`

The background routine performed by the worker thread.

`virtual void Export()`

Exports all ended spans to the configured exporter.

`void DrainQueue()`

Called when `Shutdown()` is invoked. Completely drains the queue of all its ended spans and passes them to the exporter.

`void GetWaitAdjustedTime(std::chrono::microseconds &timeout,
 std::chrono::time_point<std::chrono::system_clock> &start_time)`

Protected Attributes

`std::unique_ptr<SpanExporter> exporter_`

`const size_t max_queue_size_`

`const std::chrono::milliseconds schedule_delay_millis_`

`const size_t max_export_batch_size_`

`common::CircularBuffer<Recordable> buffer_`

`std::shared_ptr<SynchronizationData> synchronization_data_`

`std::thread worker_thread_`

Protected Static Functions

`static void NotifyCompletion(bool notify_force_flush, const std::shared_ptr<SynchronizationData>&synchronization_data)`

Notify completion of shutdown and force flush. This may be called from the any thread at any time.

Parameters

- `notify_force_flush` – Flag to indicate whether to notify force flush completion.
- `synchronization_data` – Synchronization data to be notified.

`struct SynchronizationData`

Public Members

```
std::condition_variable cv  
  
std::condition_variable force_flush_cv  
  
std::mutex cv_m  
  
std::mutex force_flush_cv_m  
  
std::mutex shutdown_m  
  
std::atomic<bool> is_force_wakeup_background_worker  
  
std::atomic<bool> is_force_flush_pending  
  
std::atomic<bool> is_force_flush_notified  
  
std::atomic<bool> is_shutdown
```

Class BatchSpanProcessorFactory

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_batch_span_processor_factory.h

Class Documentation

class **BatchSpanProcessorFactory**

Factory class for *BatchSpanProcessor*.

Public Static Functions

```
static std::unique_ptr<SpanProcessor> Create(std::unique_ptr<SpanExporter> &&exporter, const BatchSpanProcessorOptions &options)
```

Create a *BatchSpanProcessor*.

Class **IdGenerator**

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_id_generator.h

Inheritance Relationships

Derived Type

- public opentelemetry::sdk::trace::RandomIdGenerator (*Class RandomIdGenerator*)

Class Documentation

class **IdGenerator**

IdGenerator provides an interface for generating Trace Id and Span Id

Subclassed by *opentelemetry::sdk::trace::RandomIdGenerator*

Public Functions

virtual ~**IdGenerator**() = default

virtual opentelemetry::trace::SpanId **GenerateSpanId**() noexcept = 0

Returns a SpanId represented by opaque 128-bit trace identifier

virtual opentelemetry::trace::TraceId **GenerateTraceId**() noexcept = 0

Returns a TraceId represented by opaque 64-bit trace identifier

Class **MultiRecordable**

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_multi_recordable.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::Recordable (*Class Recordable*)

Class Documentation

class **MultiRecordable** : public opentelemetry::sdk::trace::*Recordable*

Public Functions

```
inline void AddRecordable(const SpanProcessor &processor, std::unique_ptr<Recordable> recordable)
    noexcept

inline const std::unique_ptr<Recordable> &GetRecordable(const SpanProcessor &processor) const
    noexcept

inline std::unique_ptr<Recordable> ReleaseRecordable(const SpanProcessor &processor) noexcept

inline void SetIdentity(const opentelemetry::trace::SpanContext &span_context,
    opentelemetry::trace::SpanId parent_span_id) noexcept override

inline void SetAttribute(nstd::string_view key, const opentelemetry::common::AttributeValue &value)
    noexcept override

inline void AddEvent(nstd::string_view name, opentelemetry::common::SystemTimestamp timestamp, const
    opentelemetry::common::KeyValueIterable &attributes) noexcept override

inline void AddLink(const opentelemetry::trace::SpanContext &span_context, const
    opentelemetry::common::KeyValueIterable &attributes) noexcept override

inline void Status(opentelemetry::trace::StatusCode code, nstd::string_view description) noexcept
    override

inline void Name(nstd::string_view name) noexcept override

inline void SpanKind(opentelemetry::trace::SpanKind span_kind) noexcept override

inline void Resource(const opentelemetry::sdk::resource::Resource &resource) noexcept override

inline void StartTime(opentelemetry::common::SystemTimestamp start_time) noexcept override

inline void Duration(std::chrono::nanoseconds duration) noexcept override

inline void InstrumentationScope(const InstrumentationScope &instrumentation_scope) noexcept
    override
```

Class MultiSpanProcessor

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_multi_span_processor.h

Nested Relationships

Nested Types

- *Struct MultiSpanProcessor::ProcessorNode*

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::SpanProcessor (*Class SpanProcessor*)

Class Documentation

```
class MultiSpanProcessor : public opentelemetry::sdk::trace::SpanProcessor
```

Span processor allow hooks for span start and end method invocations.

Built-in span processors are responsible for batching and conversion of spans to exportable representation and passing batches to exporters.

Public Functions

```
inline MultiSpanProcessor(std::vector<std::unique_ptr<SpanProcessor>> &&processors)
```

```
inline void AddProcessor(std::unique_ptr<SpanProcessor> &&processor)
```

```
inline virtual std::unique_ptr<Recordable> MakeRecordable() noexcept override
```

Create a span recordable. This requests a new span recordable from the associated exporter.

Note: This method must be callable from multiple threads.

Returns a newly initialized recordable

```
inline virtual void OnStart(Recordable &span, const opentelemetry::trace::SpanContext &parent_context)  
noexcept override
```

OnStart is called when a span is started.

Parameters

- **span** – a recordable for a span that was just started
- **parent_context** – The parent context of the span that just started

```
inline virtual void OnEnd(std::unique_ptr<Recordable> &&span) noexcept override
```

OnEnd is called when a span is ended.

Parameters **span** – a recordable for a span that was ended

```
inline virtual bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max()))  
noexcept override
```

Export all ended spans that have not yet been exported.

Parameters **timeout** – an optional timeout, the default timeout of 0 means that no timeout is applied.

```
inline virtual bool Shutdown(std::chrono::microseconds timeout = (std::chrono::microseconds::max()))
    noexcept override
```

Shut down the processor and do any cleanup required. Ended spans are exported before shutdown. After the call to Shutdown, subsequent calls to OnStart, OnEnd, ForceFlush or Shutdown will return immediately without doing anything.

Parameters **timeout** – an optional timeout, the default timeout of 0 means that no timeout is applied.

```
inline ~MultiSpanProcessor() override
```

Class ParentBasedSampler

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_parent.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::Sampler (*Class Sampler*)

Class Documentation

```
class ParentBasedSampler : public opentelemetry::sdk::trace::Sampler
```

The ParentBased sampler is a composite sampler. ParentBased(delegateSampler) either respects the parent span's sampling decision or delegates to delegateSampler for root spans.

Public Functions

```
explicit ParentBasedSampler(std::shared_ptr<Sampler> delegate_sampler) noexcept

virtual SamplingResult ShouldSample(const opentelemetry::trace::SpanContext &parent_context,
    opentelemetry::trace::TraceId trace_id, const std::string_view name,
    opentelemetry::trace::SpanKind span_kind, const
    opentelemetry::common::KeyValueIterable &attributes, const
    opentelemetry::trace::SpanContextKeyValueIterable &links) noexcept
    override
```

The decision either respects the parent span's sampling decision or delegates to delegateSampler for root spans

Returns Returns DROP always

```
virtual const std::string_view GetDescription() const noexcept override
```

Returns Description MUST be ParentBased{delegate_sampler_.getDescription()}

Class ParentBasedSamplerFactory

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_parent_factory.h

Class Documentation

```
class ParentBasedSamplerFactory
```

Factory class for *ParentBasedSampler*.

Public Static Functions

```
static std::unique_ptr<Sampler> Create(std::shared_ptr<Sampler> delegate_sampler)
```

Create a *ParentBasedSampler*.

Class RandomIdGenerator

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_random_id_generator.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::IdGenerator (*Class IdGenerator*)

Class Documentation

```
class RandomIdGenerator : public opentelemetry::sdk::trace::IdGenerator
```

Public Functions

```
opentelemetry::trace::SpanId GenerateSpanId() noexcept override
```

```
opentelemetry::trace::TraceId GenerateTraceId() noexcept override
```

Class RandomIdGeneratorFactory

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_random_id_generator_factory.h

Class Documentation

class RandomIdGeneratorFactory

Factory class for RandomIdGenerator.

Public Static Functions

static std::unique_ptr<*IdGenerator*> **Create()**

Create a RandomIdGenerator.

Class Recordable

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_recordable.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::trace::MultiRecordable (*Class MultiRecordable*)
- public opentelemetry::sdk::trace::SpanData (*Class SpanData*)

Class Documentation

class Recordable

Maintains a representation of a span in a format that can be processed by a recorder.

This class is thread-compatible.

Subclassed by *opentelemetry::sdk::trace::MultiRecordable*, *opentelemetry::sdk::trace::SpanData*

Public Functions

virtual ~Recordable() = default

virtual void **SetIdentity**(const opentelemetry::trace::SpanContext &span_context,
opentelemetry::trace::SpanId parent_span_id) noexcept = 0

Set the span context and parent span id

Parameters

- span_context** – the span context to set
- parent_span_id** – the parent span id to set

```
virtual void SetAttribute(nostd::string_view key, const opentelemetry::common::AttributeValue &value)
    noexcept = 0
```

Set an attribute of a span.

Parameters

- **name** – the name of the attribute
- **value** – the attribute value

```
virtual void AddEvent(nostd::string_view name, opentelemetry::common::SystemTimestamp timestamp, const
    opentelemetry::common::KeyValueIterable &attributes) noexcept = 0
```

Add an event to a span.

Parameters

- **name** – the name of the event
- **timestamp** – the timestamp of the event
- **attributes** – the attributes associated with the event

```
inline void AddEvent(nostd::string_view name)
```

Add an event to a span with default timestamp and attributes.

Parameters **name** – the name of the event

```
inline void AddEvent(nostd::string_view name, opentelemetry::common::SystemTimestamp timestamp)
```

Add an event to a span with default (empty) attributes.

Parameters

- **name** – the name of the event
- **timestamp** – the timestamp of the event

```
inline void AddEvent(nostd::string_view name, const opentelemetry::common::KeyValueIterable &attributes)
    noexcept
```

Add an event to a span.

Parameters

- **name** – the name of the event
- **attributes** – the attributes associated with the event

```
virtual void AddLink(const opentelemetry::trace::SpanContext &span_context, const
    opentelemetry::common::KeyValueIterable &attributes) noexcept = 0
```

Add a link to a span.

Parameters

- **span_context** – the span context of the linked span
- **attributes** – the attributes associated with the link

```
inline void AddLink(opentelemetry::trace::SpanContext span_context)
```

Add a link to a span with default (empty) attributes.

Parameters **span_context** – the span context of the linked span

```
virtual void SetStatus(opentelemetry::trace::StatusCode code, std::string_view description) noexcept = 0
    Set the status of the span.
```

Parameters

- **code** – the status code
- **description** – a description of the status

```
virtual void SetName(std::string_view name) noexcept = 0
    Set the name of the span.
```

Parameters **name** – the name to set

```
virtual void SetSpanKind(opentelemetry::trace::SpanKind span_kind) noexcept = 0
    Set the spankind of the span.
```

Parameters **span_kind** – the spankind to set

```
virtual void SetResource(const opentelemetry::sdk::resource::Resource &resource) noexcept = 0
    Set Resource of the span
```

Parameters **Resource** – the resource to set

```
virtual void SetStartTime(opentelemetry::common::SystemTimestamp start_time) noexcept = 0
    Set the start time of the span.
```

Parameters **start_time** – the start time to set

```
virtual void SetDuration(std::chrono::nanoseconds duration) noexcept = 0
    Set the duration of the span.
```

Parameters **duration** – the duration to set

```
inline virtual explicit operator SpanData*() const
    Get the SpanData object for this Recordable.
```

Returns *SpanData**

```
virtual void SetInstrumentationScope(const InstrumentationScope &instrumentation_scope) noexcept = 0
    Set the instrumentation scope of the span.
```

Parameters **instrumentation_scope** – the instrumentation scope to set

```
inline void SetInstrumentationLibrary(const InstrumentationScope &instrumentation_scope) noexcept
```

Class Sampler

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_sampler.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::trace::AlwaysOffSampler (*Class AlwaysOffSampler*)
- public opentelemetry::sdk::trace::AlwaysOnSampler (*Class AlwaysOnSampler*)
- public opentelemetry::sdk::trace::ParentBasedSampler (*Class ParentBasedSampler*)
- public opentelemetry::sdk::trace::TraceIdRatioBasedSampler (*Class TraceIdRatioBasedSampler*)

Class Documentation

class Sampler

The *Sampler* interface allows users to create custom samplers which will return a *SamplingResult* based on information that is typically available just before the Span was created.

Subclassed by *opentelemetry::sdk::trace::AlwaysOffSampler*, *opentelemetry::sdk::trace::AlwaysOnSampler*, *opentelemetry::sdk::trace::ParentBasedSampler*, *opentelemetry::sdk::trace::TraceIdRatioBasedSampler*

Public Functions

virtual ~**Sampler**() = default

virtual *SamplingResult* **ShouldSample**(const opentelemetry::trace::SpanContext &parent_context, opentelemetry::trace::TraceId trace_id, std::string_view name, opentelemetry::trace::SpanKind span_kind, const opentelemetry::common::KeyValueIterable &attributes, const opentelemetry::trace::SpanContextKeyValueIterable &links) noexcept = 0

Called during Span creation to make a sampling decision.

Since 0.1.0

Parameters

- **parent_context** – a const reference to the SpanContext of a parent Span. An invalid SpanContext if this is a root span.
- **trace_id** – the TraceId for the new Span. This will be identical to that in the parentContext, unless this is a root span.
- **name** – the name of the new Span.
- **spanKind** – the opentelemetry::trace::SpanKind of the Span.
- **attributes** – list of AttributeValue with their keys.
- **links** – Collection of links that will be associated with the Span to be created.

Returns sampling result whether span should be sampled or not.

```
virtual const std::string_view GetDescription() const noexcept = 0
```

Returns the sampler name or short description with the configuration. This may be displayed on debug pages or in the logs.

Returns the description of this *Sampler*.

Class SimpleSpanProcessor

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_simple_processor.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::SpanProcessor (*Class SpanProcessor*)

Class Documentation

```
class SimpleSpanProcessor : public opentelemetry::sdk::trace::SpanProcessor
```

The simple span processor passes finished recordables to the configured *SpanExporter*, as soon as they are finished.

OnEnd and ForceFlush are no-ops.

All calls to the configured *SpanExporter* are synchronized using a spin-lock on an atomic_flag.

Public Functions

```
inline explicit SimpleSpanProcessor(std::unique_ptr<SpanExporter> &&exporter) noexcept
```

Initialize a simple span processor.

Parameters **exporter** – the exporter used by the span processor

```
inline virtual std::unique_ptr<Recordable> MakeRecordable() noexcept override
```

Create a span recordable. This requests a new span recordable from the associated exporter.

Note: This method must be callable from multiple threads.

Returns a newly initialized recordable

```
inline virtual void OnStart(Recordable&, const opentelemetry::trace::SpanContext&) noexcept override
```

OnStart is called when a span is started.

Parameters

- **span** – a recordable for a span that was just started
- **parent_context** – The parent context of the span that just started

```
inline virtual void OnEnd(std::unique_ptr<Recordable> &&span) noexcept override  
    OnEnd is called when a span is ended.
```

Parameters **span** – a recordable for a span that was ended

```
inline virtual bool ForceFlush(std::chrono::microseconds) noexcept override  
    Export all ended spans that have not yet been exported.
```

Parameters **timeout** – an optional timeout, the default timeout of 0 means that no timeout is applied.

```
inline virtual bool Shutdown(std::chrono::microseconds timeout = (std::chrono::microseconds::max)())  
    noexcept override
```

Shut down the processor and do any cleanup required. Ended spans are exported before shutdown. After the call to Shutdown, subsequent calls to OnStart, OnEnd, ForceFlush or Shutdown will return immediately without doing anything.

Parameters **timeout** – an optional timeout, the default timeout of 0 means that no timeout is applied.

```
inline ~SimpleSpanProcessor() override
```

Class SimpleSpanProcessorFactory

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_simple_processor_factory.h

Class Documentation

```
class SimpleSpanProcessorFactory  
    Factory class for SimpleSpanProcessor.
```

Public Static Functions

```
static std::unique_ptr<SpanProcessor> Create(std::unique_ptr<SpanExporter> &&exporter)  
    Create a SimpleSpanProcessor.
```

Class SpanData

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_span_data.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::Recordable (*Class Recordable*)

Class Documentation

class **SpanData** : public opentelemetry::sdk::trace::Recordable

SpanData is a representation of all data collected by a span.

Public Functions

inline **SpanData()**

inline opentelemetry::trace::*TraceId* **GetTraceId()** const noexcept

Get the trace id for this span

Returns the trace id for this span

inline opentelemetry::trace::*SpanId* **GetSpanId()** const noexcept

Get the span id for this span

Returns the span id for this span

inline const opentelemetry::trace::*SpanContext* &**GetSpanContext()** const noexcept

Get the span context for this span

Returns the span context for this span

inline opentelemetry::trace::*SpanId* **GetParentSpanId()** const noexcept

Get the parent span id for this span

Returns the span id for this span's parent

inline opentelemetry::nstd::string_view **GetName()** const noexcept

Get the name for this span

Returns the name for this span

inline opentelemetry::trace::*SpanKind* **GetSpanKind()** const noexcept

Get the kind of this span

Returns the kind of this span

inline opentelemetry::trace::*StatusCode* **GetStatus()** const noexcept

Get the status for this span

Returns the status for this span

inline opentelemetry::nstd::string_view **GetDescription()** const noexcept

Get the status description for this span

Returns the description of the the status of this span

```
inline const opentelemetry::sdk::resource::Resource &GetResource() const noexcept
    Get the attributes associated with the resource

Returns the attributes associated with the resource configured for TracerProvider

inline const opentelemetry::sdk::trace::InstrumentationScope &GetInstrumentationScope() const
    noexcept
    Get the attributes associated with the resource

Returns the attributes associated with the resource configured for TracerProvider

inline const opentelemetry::sdk::trace::InstrumentationScope &GetInstrumentationLibrary() const
    noexcept

inline opentelemetry::common::SystemTimestamp GetStartTime() const noexcept
    Get the start time for this span

Returns the start time for this span

inline std::chrono::nanoseconds GetDuration() const noexcept
    Get the duration for this span

Returns the duration for this span

inline const std::unordered_map<std::string, common::OwnedAttributeValue> &GetAttributes() const
    noexcept
    Get the attributes for this span

Returns the attributes for this span

inline const std::vector<SpanDataEvent> &GetEvents() const noexcept
    Get the events associated with this span

Returns the events associated with this span

inline const std::vector<SpanDataLink> &GetLinks() const noexcept
    Get the links associated with this span

Returns the links associated with this span

inline virtual void SetIdentity(const opentelemetry::trace::SpanContext &span_context,
    opentelemetry::trace::SpanId parent_span_id) noexcept override
    Set the span context and parent span id

Parameters

- span_context – the span context to set
- parent_span_id – the parent span id to set

inline virtual void SetAttribute(nostd::string_view key, const opentelemetry::common::AttributeValue
    &value) noexcept override
    Set an attribute of a span.

Parameters

- name – the name of the attribute
- value – the attribute value

```

```
inline virtual void AddEvent(nostd::string_view name, opentelemetry::common::SystemTimestamp timestamp
    =
        opentelemetry::common::SystemTimestamp(std::chrono::system_clock::now()),
        const opentelemetry::common::KeyValueIterable &attributes =
            opentelemetry::common::KeyValueIterableView<std::map<std::string,
            int>>({})) noexcept override
```

Add an event to a span.

Parameters

- **name** – the name of the event
- **timestamp** – the timestamp of the event
- **attributes** – the attributes associated with the event

```
inline virtual void AddLink(const opentelemetry::trace::SpanContext &span_context, const
    opentelemetry::common::KeyValueIterable &attributes) noexcept override
```

Add a link to a span.

Parameters

- **span_context** – the span context of the linked span
- **attributes** – the attributes associated with the link

```
inline virtual void SetStatus(opentelemetry::trace::StatusCode code, nostd::string_view description)
    noexcept override
```

Set the status of the span.

Parameters

- **code** – the status code
- **description** – a description of the status

```
inline virtual void SetName(nostd::string_view name) noexcept override
```

Set the name of the span.

Parameters **name** – the name to set

```
inline virtual void SetSpanKind(opentelemetry::trace::SpanKind span_kind) noexcept override
```

Set the spankind of the span.

Parameters **span_kind** – the spankind to set

```
inline virtual void SetResource(const opentelemetry::sdk::resource::Resource &resource) noexcept override
```

Set Resource of the span

Parameters **Resource** – the resource to set

```
inline virtual void SetStartTime(opentelemetry::common::SystemTimestamp start_time) noexcept override
```

Set the start time of the span.

Parameters **start_time** – the start time to set

```
inline virtual void SetDuration(std::chrono::nanoseconds duration) noexcept override
```

Set the duration of the span.

Parameters **duration** – the duration to set

```
inline virtual void SetInstrumentationScope(const InstrumentationScope &instrumentation_scope)
    noexcept override
```

Set the instrumentation scope of the span.

Parameters `instrumentation_scope` – the instrumentation scope to set

Class SpanDataEvent

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_span_data.h

Class Documentation

class `SpanDataEvent`

Class for storing events in `SpanData`.

Public Functions

```
inline SpanDataEvent(std::string name, opentelemetry::common::SystemTimestamp timestamp, const
    opentelemetry::common::KeyValueIterable &attributes)
```

inline std::string `GetName()` const noexcept

Get the name for this event

Returns the name for this event

```
inline opentelemetry::common::SystemTimestamp GetTimestamp() const noexcept
```

Get the timestamp for this event

Returns the timestamp for this event

```
inline const std::unordered_map<std::string, common::OwnedAttributeValue> &GetAttributes() const
    noexcept
```

Get the attributes for this event

Returns the attributes for this event

Class SpanDataLink

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_span_data.h

Class Documentation

class **SpanDataLink**

Class for storing links in *SpanData*.

Public Functions

```
inline SpanDataLink(opentelemetry::trace::SpanContext span_context, const opentelemetry::common::KeyValueIterable &attributes)
```

```
inline const std::unordered_map<std::string, common::OwnedAttributeValue> &GetAttributes() const noexcept
```

Get the attributes for this link

Returns the attributes for this link

```
inline const opentelemetry::trace::SpanContext &GetSpanContext() const noexcept
```

Get the span context for this link

Returns the span context for this link

Class **SpanExporter**

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_exporter.h

Class Documentation

class **SpanExporter**

SpanExporter defines the interface that protocol-specific span exporters must implement.

Public Functions

```
virtual ~SpanExporter() = default
```

```
virtual std::unique_ptr<Recordable> MakeRecordable() noexcept = 0
```

Create a span recordable. This object will be used to record span data and will subsequently be passed to *SpanExporter::Export*. Vendors can implement custom recordables or use the default *SpanData* recordable provided by the SDK.

Note: This method must be callable from multiple threads.

Returns a newly initialized *Recordable* object

```
virtual sdk::common::ExportResult Export(const nostd::span<std::unique_ptr<opentelemetry::sdk::trace::Recordable>> &spans) noexcept = 0
```

Exports a batch of span recordables. This method must not be called concurrently for the same exporter instance.

Parameters **spans** – a span of unique pointers to span recordables

```
virtual bool Shutdown(std::chrono::microseconds timeout = std::chrono::microseconds::max()) noexcept = 0  
    Shut down the exporter.
```

Parameters **timeout** – an optional timeout.

Returns return the status of the operation.

Class SpanProcessor

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_processor.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::trace::BatchSpanProcessor (*Class BatchSpanProcessor*)
- public opentelemetry::sdk::trace::MultiSpanProcessor (*Class MultiSpanProcessor*)
- public opentelemetry::sdk::trace::SimpleSpanProcessor (*Class SimpleSpanProcessor*)

Class Documentation

class SpanProcessor

Span processor allow hooks for span start and end method invocations.

Built-in span processors are responsible for batching and conversion of spans to exportable representation and passing batches to exporters.

Subclassed by *opentelemetry::sdk::trace::BatchSpanProcessor*, *opentelemetry::sdk::trace::MultiSpanProcessor*, *opentelemetry::sdk::trace::SimpleSpanProcessor*

Public Functions

```
virtual ~SpanProcessor() = default
```

```
virtual std::unique_ptr<Recordable> MakeRecordable() noexcept = 0
```

Create a span recordable. This requests a new span recordable from the associated exporter.

Note: This method must be callable from multiple threads.

Returns a newly initialized recordable

```
virtual void OnStart(Recordable &span, const opentelemetry::trace::SpanContext &parent_context)  
    noexcept = 0
```

OnStart is called when a span is started.

Parameters

- span** – a recordable for a span that was just started

- **parent_context** – The parent context of the span that just started

```
virtual void OnEnd(std::unique_ptr<Recordable> &&span) noexcept = 0
```

OnEnd is called when a span is ended.

Parameters **span** – a recordable for a span that was ended

```
virtual bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max)()) noexcept  
= 0
```

Export all ended spans that have not yet been exported.

Parameters **timeout** – an optional timeout, the default timeout of 0 means that no timeout is applied.

```
virtual bool Shutdown(std::chrono::microseconds timeout = (std::chrono::microseconds::max)()) noexcept = 0
```

Shut down the processor and do any cleanup required. Ended spans are exported before shutdown. After the call to Shutdown, subsequent calls to OnStart, OnEnd, ForceFlush or Shutdown will return immediately without doing anything.

Parameters **timeout** – an optional timeout, the default timeout of 0 means that no timeout is applied.

Class **TraceIdRatioBasedSampler**

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_trace_id_ratio.h

Inheritance Relationships

Base Type

- public opentelemetry::sdk::trace::Sampler (*Class Sampler*)

Class Documentation

```
class TraceIdRatioBasedSampler : public opentelemetry::sdk::trace::Sampler
```

The TraceIdRatioBased sampler computes and returns a decision based on the provided trace_id and the configured ratio.

Public Functions

```
explicit TraceIdRatioBasedSampler(double ratio)
```

Parameters **ratio** – a required value, $1.0 \geq \text{ratio} \geq 0.0$. If the given trace_id falls into a given ratio of all possible trace_id values, ShouldSample will return RECORD_AND_SAMPLE.

Throws invalid_argument – if ratio is out of bounds [0.0, 1.0]

```
virtual SamplingResult ShouldSample(const opentelemetry::trace::SpanContext&,  
opentelemetry::trace::TraceId trace_id, std::string_view,  
opentelemetry::trace::SpanKind, const  
opentelemetry::common::KeyValueIterable&, const  
opentelemetry::trace::SpanContextKeyValueIterable&) noexcept  
override
```

Returns Returns either RECORD_AND_SAMPLE or DROP based on current sampler configuration and provided trace_id and ratio. trace_id is used as a pseudorandom value in conjunction with the predefined ratio to determine whether this trace should be sampled

virtual `nostd::string_view GetDescription() const noexcept override`

Returns Description MUST be `TraceIdRatioBasedSampler{0.000100}`

Class TracelIdRatioBasedSamplerFactory

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_samplers_trace_id_ratio_factory.h

Class Documentation

```
class TraceIdRatioBasedSamplerFactory  
    Factory class for TraceIdRatioBasedSampler.
```

Public Static Functions

```
static std::unique_ptr<Sampler> Create(double ratio)  
    Create a TraceIdRatioBasedSampler.
```

Class Tracer

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_tracer.h

Inheritance Relationships

Base Types

- public `opentelemetry::trace::Tracer` ([Class Tracer](#))
- public `std::enable_shared_from_this<Tracer>`

Class Documentation

```
class Tracer : public opentelemetry::trace::Tracer, public std::enable_shared_from_this<Tracer>
```

Public Functions

```
explicit Tracer(std::shared_ptr<sdk::trace::TracerContext> context, std::unique_ptr<InstrumentationScope>
instrumentation_scope = InstrumentationScope::Create("")) noexcept
    Construct a new Tracer with the given context pipeline.

nostd::shared_ptr<trace_api::Span> StartSpan(nostd::string_view name, const
                                                opentelemetry::common::KeyValueIterable &attributes, const
                                                trace_api::SpanContextKeyValueIterable &links, const
                                                trace_api::StartSpanOptions &options = {} ) noexcept
    override

void ForceFlushWithMicroseconds(uint64_t timeout) noexcept override

void CloseWithMicroseconds(uint64_t timeout) noexcept override

inline SpanProcessor &GetProcessor() noexcept
    Returns the configured span processor.

inline IdGenerator &GetIdGenerator() const noexcept
    Returns the configured Id generator

inline const InstrumentationScope &GetInstrumentationScope() const noexcept
    Returns the associated instrumentation scope

inline const InstrumentationScope &GetInstrumentationLibrary() const noexcept

inline const opentelemetry::sdk::resource::Resource &GetResource()
    Returns the currently configured resource

inline Sampler &GetSampler()
```

Class TracerContext

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_tracer_context.h

Class Documentation

class **TracerContext**

A class which stores the TracerProvider context.

This class meets the following design criteria:

- A shared reference between TracerProvider and Tracers instantiated.
- A thread-safe class that allows updating/altering processor/exporter pipelines and sampling config.
- The owner/destroyer of Processors/Exporters. These will remain active until this class is destroyed. I.e. Sampling, Exporting, flushing, Custom Iterator etc. are all ok if this object is alive, and they will work together. If this object is destroyed, then no shared references to Processor, Exporter, *Recordable*, Custom Iterator etc. should exist, and all associated pipelines will have been flushed.

Public Functions

```
explicit TracerContext(std::vector<std::unique_ptr<SpanProcessor>> &&processor,  
    opentelemetry::sdk::resource::Resource resource =  
    opentelemetry::sdk::resource::Resource::Create({}), std::unique_ptr<Sampler>  
    sampler = std::unique_ptr<AlwaysOnSampler>(new AlwaysOnSampler),  
    std::unique_ptr<IdGenerator> id_generator = std::unique_ptr<IdGenerator>(new  
    RandomIdGenerator())) noexcept
```

```
void AddProcessor(std::unique_ptr<SpanProcessor> processor) noexcept
```

Attaches a span processor to list of configured processors to this tracer context. Processor once attached can't be removed.

Note: This method is not thread safe.

Parameters **processor** – The new span processor for this tracer. This must not be a nullptr.
Ownership is given to the *TracerContext*.

```
Sampler &GetSampler() const noexcept
```

Obtain the sampler associated with this tracer.

Returns The sampler for this tracer.

```
SpanProcessor &GetProcessor() const noexcept
```

Obtain the configured (composite) processor.

Note: When more than one processor is active, this will return an “aggregate” processor

```
const opentelemetry::sdk::resource::Resource &GetResource() const noexcept
```

Obtain the resource associated with this tracer context.

Returns The resource for this tracer context.

```
opentelemetry::sdk::trace::IdGenerator &GetIdGenerator() const noexcept
```

Obtain the Id Generator associated with this tracer context.

Returns The ID Generator for this tracer context.

```
bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max)()) noexcept
```

Force all active SpanProcessors to flush any buffered spans within the given timeout.

```
bool Shutdown() noexcept
```

Shutdown the span processor associated with this tracer provider.

Class TracerContextFactory

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_tracer_context_factory.h

Class Documentation

class **TracerContextFactory**

Factory class for *TracerContext*.

Public Static Functions

```
static std::unique_ptr<TracerContext> Create(std::vector<std::unique_ptr<SpanProcessor>> &&processors)
    Create a TracerContext.
```

```
static std::unique_ptr<TracerContext> Create(std::vector<std::unique_ptr<SpanProcessor>> &&processors,
                                              const opentelemetry::sdk::resource::Resource &resource)
    Create a TracerContext.
```

```
static std::unique_ptr<TracerContext> Create(std::vector<std::unique_ptr<SpanProcessor>> &&processors,
                                              const opentelemetry::sdk::resource::Resource &resource,
                                              std::unique_ptr<Sampler> sampler)
```

Create a *TracerContext*.

```
static std::unique_ptr<TracerContext> Create(std::vector<std::unique_ptr<SpanProcessor>> &&processors,
                                              const opentelemetry::sdk::resource::Resource &resource,
                                              std::unique_ptr<Sampler> sampler,
                                              std::unique_ptr<IdGenerator> id_generator)
```

Create a *TracerContext*.

Class **TracerProvider**

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_tracer_provider.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::TracerProvider (*Class TracerProvider*)

Class Documentation

class **TracerProvider** : public opentelemetry::trace::TracerProvider

Public Functions

```
explicit TracerProvider(std::unique_ptr<SpanProcessor> processor,
                       opentelemetry::sdk::resource::Resource resource =
                           opentelemetry::sdk::resource::Resource::Create({}),
                       std::unique_ptr<Sampler> sampler = std::unique_ptr<AlwaysOnSampler>(new AlwaysOnSampler),
                       std::unique_ptr<opentelemetry::sdk::trace::IdGenerator> id_generator =
                           std::unique_ptr<opentelemetry::sdk::trace::IdGenerator>(new RandomIdGenerator())))
    noexcept
```

Initialize a new tracer provider with a specified sampler

Parameters

- **processor** – The span processor for this tracer provider. This must not be a nullptr.
- **resource** – The resources for this tracer provider.
- **sampler** – The sampler for this tracer provider. This must not be a nullptr.
- **id_generator** – The custom id generator for this tracer provider. This must not be a nullptr

```
explicit TracerProvider(std::vector<std::unique_ptr<SpanProcessor>> &&processors,
                       opentelemetry::sdk::resource::Resource resource =
                           opentelemetry::sdk::resource::Resource::Create({}),
                       std::unique_ptr<Sampler> sampler = std::unique_ptr<AlwaysOnSampler>(new AlwaysOnSampler),
                       std::unique_ptr<opentelemetry::sdk::trace::IdGenerator> id_generator =
                           std::unique_ptr<opentelemetry::sdk::trace::IdGenerator>(new RandomIdGenerator()))
    noexcept
```

```
explicit TracerProvider(std::shared_ptr<sdk::trace::TracerContext> context) noexcept
```

Initialize a new tracer provider with a specified context

Parameters **context** – The shared tracer configuration/pipeline for this provider.

~TracerProvider() override

```
opentelemetry::nstd::shared_ptr<opentelemetry::trace::Tracer> GetTracer(nstd::string_view
    library_name,
    nstd::string_view
    library_version = "",
    nstd::string_view schema_url =
    "") noexcept override
```

```
void AddProcessor(std::unique_ptr<SpanProcessor> processor) noexcept
```

Attaches a span processor to list of configured processors for this tracer provider.

Note: This process may not receive any in-flight spans, but will get newly created spans. Note: This method is not thread safe, and should ideally be called from main thread.

Parameters **processor** – The new span processor for this tracer provider. This must not be a nullptr.

```
const opentelemetry::sdk::resource::Resource &GetResource() const noexcept
```

Obtain the resource associated with this tracer provider.

Returns The resource for this tracer provider.

```

bool Shutdown() noexcept
    Shutdown the span processor associated with this tracer provider.

bool ForceFlush(std::chrono::microseconds timeout = (std::chrono::microseconds::max)()) noexcept
    Force flush the span processor associated with this tracer provider.

```

Class TracerProviderFactory

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_trace_tracer_provider_factory.h

Class Documentation

class TracerProviderFactory

Factory class for TracerProvider. See TracerProvider.

Public Static Functions

```

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::unique_ptr<SpanProcessor>
processor)

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::unique_ptr<SpanProcessor>
processor, const
opentelemetry::sdk::resource::Resource
&resource)

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::unique_ptr<SpanProcessor>
processor, const
opentelemetry::sdk::resource::Resource
&resource, std::unique_ptr<Sampler>
sampler)

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::unique_ptr<SpanProcessor>
processor, const
opentelemetry::sdk::resource::Resource
&resource, std::unique_ptr<Sampler>
sampler, std::unique_ptr<IdGenerator>
id_generator)

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::vector<std::unique_ptr<SpanProcessor>>
&&processors)

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::vector<std::unique_ptr<SpanProcessor>>
&&processors, const
opentelemetry::sdk::resource::Resource
&resource)

static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::vector<std::unique_ptr<SpanProcessor>>
&&processors, const
opentelemetry::sdk::resource::Resource
&resource, std::unique_ptr<Sampler>
sampler)

```

```
static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::vector<std::unique_ptr<SpanProcessor>>
    &&processors, const
    opentelemetry::sdk::resource::Resource
    &resource, std::unique_ptr<Sampler>
    sampler, std::unique_ptr<IdGenerator>
    id_generator)
```

```
static std::unique_ptr<opentelemetry::trace::TracerProvider> Create(std::shared_ptr<sdk::trace::TracerContext>
    context)
```

Class DefaultSpan

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_default_span.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::Span (*Class Span*)

Class Documentation

class **DefaultSpan** : public opentelemetry::trace::Span

DefaultSpan provides a non-operational *Span* that propagates the tracer context by wrapping it inside the *Span* object.

Public Functions

```
inline virtual trace::SpanContext GetContext() const noexcept override
```

```
inline virtual bool IsRecording() const noexcept override
```

```
inline virtual void SetAttribute(nostd::string_view, const common::AttributeValue&) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view, common::SystemTimestamp) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view, const common::KeyValueIterable&) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view, common::SystemTimestamp, const
    common::KeyValueIterable&) noexcept override
```

```
inline virtual void SetStatus(StatusCode, nostd::string_view) noexcept override
```

```
inline virtual void UpdateName(nostd::string_view) noexcept override
```

```
inline virtual void End(const EndSpanOptions&) noexcept override
```

Mark the end of the *Span*. Only the timing of the first End call for a given *Span* will be recorded, and implementations are free to ignore all further calls.

Parameters options – can be used to manually define span properties like the end timestamp

```
inline nostd::string_view ToString() const noexcept
```

```
inline DefaultSpan(SpanContext span_context) noexcept
```

```
inline DefaultSpan(DefaultSpan &&spn) noexcept
```

```
inline DefaultSpan(const DefaultSpan &spn) noexcept
```

Public Static Functions

```
static inline DefaultSpan GetInvalid()
```

Class NoopSpan

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::Span (*Class Span*)

Class Documentation

```
class NoopSpan : public opentelemetry::trace::Span
```

No-op implementation of *Span*. This class should not be used directly.

Public Functions

```
inline explicit NoopSpan(const std::shared_ptr<Tracer> &tracer) noexcept
```

```
inline explicit NoopSpan(const std::shared_ptr<Tracer> &tracer, nostd::unique_ptr<SpanContext> span_context) noexcept
```

```
inline virtual void SetAttribute(nostd::string_view, const common::AttributeValue&) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view, common::SystemTimestamp) noexcept override
```

```
inline virtual void AddEvent(nostd::string_view, const common::KeyValueIterable&) noexcept override
```

```
inline virtual void AddEvent(nstd::string_view, common::SystemTimestamp, const  
common::KeyValueIterable&) noexcept override
```

```
inline virtual void Status(StatusCode, nstd::string_view) noexcept override
```

```
inline virtual void UpdateName(nstd::string_view) noexcept override
```

```
inline virtual void End(const EndSpanOptions&) noexcept override
```

Mark the end of the *Span*. Only the timing of the first End call for a given *Span* will be recorded, and implementations are free to ignore all further calls.

Parameters *options* – can be used to manually define span properties like the end timestamp

```
inline virtual bool IsRecording() const noexcept override
```

```
inline virtual SpanContext GetContext() const noexcept override
```

Class NoopTracer

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_noop.h

Inheritance Relationships

Base Types

- public opentelemetry::trace::Tracer (*Class Tracer*)
- public std::enable_shared_from_this<NoopTracer>

Class Documentation

```
class NoopTracer : public opentelemetry::trace::Tracer, public std::enable_shared_from_this<NoopTracer>
```

No-op implementation of *Tracer*.

Public Functions

```
inline virtual nstd::shared_ptr<Span> StartSpan(nstd::string_view, const common::KeyValueIterable&,  
const SpanContextKeyValueIterable&, const  
StartSpanOptions&) noexcept override
```

Starts a span.

Optionally sets attributes at *Span* creation from the given key/value pairs.

Attributes will be processed in order, previous attributes with the same key will be overwritten.

```
inline virtual void ForceFlushWithMicroseconds(uint64_t) noexcept override
```

```
inline virtual void CloseWithMicroseconds(uint64_t) noexcept override
```

Class NoopTracerProvider

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_noop.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::TracerProvider (*Class TracerProvider*)

Class Documentation

```
class NoopTracerProvider : public opentelemetry::trace::TracerProvider
```

No-op implementation of a *TracerProvider*.

Public Functions

```
inline NoopTracerProvider() noexcept
```

```
inline virtual std::shared_ptr<opentelemetry::trace::Tracer> GetTracer(std::string_view,  
                           std::string_view,  
                           std::string_view) noexcept  
override
```

Gets or creates a named tracer instance.

Optionally a version can be passed to create a named and versioned tracer instance.

Class NullSpanContext

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_span_context_kv_iterable.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::SpanContextKeyValueIterable (*Class SpanContextKeyValueIterable*)

Class Documentation

class **NullSpanContext** : public opentelemetry::trace::SpanContextKeyValueIterable

Null *Span* context that does not carry any information.

Public Functions

```
inline virtual bool ForEachKeyValue(nostd::function_ref<bool(SpanContext, const  
opentelemetry::common::KeyValueIterable&)>) const noexcept  
override
```

Iterate over SpanContext/key-value pairs

Parameters **callback** – a callback to invoke for each key-value for each SpanContext. If the callback returns false, the iteration is aborted.

Returns true if every SpanContext/key-value pair was iterated over

```
inline virtual size_t size() const noexcept override
```

Returns the number of key-value pairs

Class B3Propagator

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_b3_propagator.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::propagation::B3PropagatorExtractor

Class Documentation

class **B3Propagator** : public opentelemetry::trace::propagation::*B3PropagatorExtractor*

Public Functions

```
inline void Inject(opentelemetry::context::propagation::TextMapCarrier &carrier, const context::Context  
&context) noexcept override
```

```
inline bool Fields(nostd::function_ref<bool(nostd::string_view)> callback) const noexcept override
```

Class B3PropagatorExtractor

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_b3_propagator.h

Inheritance Relationships

Base Type

- public opentelemetry::context::propagation::TextMapPropagator

Derived Types

- public opentelemetry::trace::propagation::B3Propagator (*Class B3Propagator*)
- public opentelemetry::trace::propagation::B3PropagatorMultiHeader (*Class B3PropagatorMultiHeader*)

Class Documentation

class **B3PropagatorExtractor** : public opentelemetry::context::propagation::TextMapPropagator

Subclassed by *opentelemetry::trace::propagation::B3Propagator*, *opentelemetry::trace::propagation::B3PropagatorMultiHeader*

Public Functions

inline *context*::Context **Extract**(const opentelemetry::context::propagation::TextMapCarrier &carrier, *context*::Context &context) noexcept override

Public Static Functions

static inline *TraceId* **TraceIdFromHex**(nstd::string_view trace_id)

static inline *SpanId* **SpanIdFromHex**(nstd::string_view span_id)

static inline *TraceFlags* **TraceFlagsFromHex**(nstd::string_view trace_flags)

Class B3PropagatorMultiHeader

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_b3_propagator.h

Inheritance Relationships

Base Type

- public opentelemetry::trace::propagation::B3PropagatorExtractor

Class Documentation

class **B3PropagatorMultiHeader** : public opentelemetry::trace::propagation::*B3PropagatorExtractor*

Public Functions

```
inline void Inject(opentelemetry::context::propagation::TextMapCarrier &carrier, const context::Context &context) noexcept override
```

```
inline bool Fields(std::function_ref<bool(std::string_view)> callback) const noexcept override
```

Class **HttpTraceContext**

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_http_trace_context.h

Inheritance Relationships

Base Type

- public opentelemetry::context::propagation::TextMapPropagator

Class Documentation

class **HttpTraceContext** : public opentelemetry::context::propagation::*TextMapPropagator*

Public Functions

```
inline void Inject(opentelemetry::context::propagation::TextMapCarrier &carrier, const context::Context &context) noexcept override
```

```
inline context::Context Extract(const opentelemetry::context::propagation::TextMapCarrier &carrier, context::Context &context) noexcept override
```

Public Static Functions

```
static inline TraceId TraceIdFromHex(nostd::string_view trace_id)  
static inline SpanId SpanIdFromHex(nostd::string_view span_id)  
static inline TraceFlags TraceFlagsFromHex(nostd::string_view trace_flags)
```

Class JaegerPropagator

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_jaeger.h

Inheritance Relationships

Base Type

- public opentelemetry::context::propagation::TextMapPropagator

Class Documentation

```
class JaegerPropagator : public opentelemetry::context::propagation::TextMapPropagator
```

Public Functions

```
inline void Inject(context::propagation::TextMapCarrier &carrier, const context::Context &context)  
    noexcept override  
  
inline context::Context Extract(const context::propagation::TextMapCarrier &carrier, context::Context  
    &context) noexcept override  
  
inline bool Fields(nostd::function_ref<bool(nostd::string_view)> callback) const noexcept override
```

Class Provider

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_provider.h

Class Documentation

```
class Provider
```

Stores the singleton global *TracerProvider*.

Public Static Functions

static inline `nostd::shared_ptr<TracerProvider>` **GetTracerProvider()** noexcept

Returns the singleton `TracerProvider`.

By default, a no-op `TracerProvider` is returned. This will never return a nullptr `TracerProvider`.

static inline void **SetTracerProvider(nostd::shared_ptr<TracerProvider> tp)** noexcept

Changes the singleton `TracerProvider`.

Class Scope

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_scope.h

Class Documentation

class Scope

Controls how long a span is active.

On creation of the `Scope` object, the given span is set to the currently active span. On destruction, the given span is ended and the previously active span will be the currently active span again.

Public Functions

inline **Scope(const nostd::shared_ptr &span)** noexcept

Initialize a new scope.

Parameters `span` – the given span will be set as the currently active span.

Class Span

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_span.h

Inheritance Relationships

Derived Types

• public `opentelemetry::trace::DefaultSpan` (*Class DefaultSpan*)

• public `opentelemetry::trace::NoopSpan` (*Class NoopSpan*)

Class Documentation

class **Span**

A *Span* represents a single operation within a Trace.

Subclassed by `opentelemetry::trace::DefaultSpan`, `opentelemetry::trace::NoopSpan`

Public Functions

Span() = default

virtual ~**Span()** = default

Span(const *Span*&) = delete

Span(*Span*&&) = delete

Span &**operator=**(const *Span*&) = delete

Span &**operator=**(*Span*&&) = delete

virtual void **SetAttribute**(`std::string_view` key, const common::*AttributeValue* &value) noexcept = 0

virtual void **AddEvent**(`std::string_view` name) noexcept = 0

virtual void **AddEvent**(`std::string_view` name, common::*SystemTimestamp* timestamp) noexcept = 0

virtual void **AddEvent**(`std::string_view` name, common::*SystemTimestamp* timestamp, const common::*KeyValueIterable* &attributes) noexcept = 0

inline virtual void **AddEvent**(`std::string_view` name, const common::*KeyValueIterable* &attributes) noexcept

template<class T, `std::enable_if_t<common::detail::is_key_value_iterable<T>::value>`* = nullptr>
inline void **AddEvent**(`std::string_view` name, common::*SystemTimestamp* timestamp, const T &attributes) noexcept

template<class T, `std::enable_if_t<common::detail::is_key_value_iterable<T>::value>`* = nullptr>
inline void **AddEvent**(`std::string_view` name, const T &attributes) noexcept

inline void **AddEvent**(`std::string_view` name, common::*SystemTimestamp* timestamp,
std::initializer_list<std::pair<`std::string_view`, common::*AttributeValue*>> attributes) noexcept

inline void **AddEvent**(`std::string_view` name, std::initializer_list<std::pair<`std::string_view`, common::*AttributeValue*>> attributes) noexcept

virtual void **SetStatus**(*StatusCode* code, `std::string_view` description = "") noexcept = 0

virtual void **UpdateName**(`std::string_view` name) noexcept = 0

virtual void **End**(const trace::*EndSpanOptions* &options = {}) noexcept = 0

Mark the end of the *Span*. Only the timing of the first End call for a given *Span* will be recorded, and implementations are free to ignore all further calls.

Parameters **options** – can be used to manually define span properties like the end timestamp

```
virtual trace::SpanContext GetContext() const noexcept = 0  
virtual bool IsRecording() const noexcept = 0
```

Class SpanContext

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_span_context.h

Class Documentation

class **SpanContext**

Public Functions

```
inline SpanContext(bool sampled_flag, bool is_remote) noexcept  
inline SpanContext(TraceId trace_id, SpanId span_id, TraceFlags trace_flags, bool is_remote,  
                    nostd::shared_ptr<TraceState> trace_state = TraceState::GetDefault()) noexcept  
SpanContext(const SpanContext &ctx) = default  
inline bool IsValid() const noexcept  
inline const opentelemetry::trace::TraceFlags &trace_flags() const noexcept  
inline const opentelemetry::trace::TraceId &trace_id() const noexcept  
inline const opentelemetry::trace::SpanId &span_id() const noexcept  
inline const nostd::shared_ptr<opentelemetry::trace::TraceState> &trace_state() const noexcept  
inline bool operator==(const SpanContext &that) const noexcept  
SpanContext &operator=(const SpanContext &ctx) = default  
inline bool IsRemote() const noexcept  
inline bool IsSampled() const noexcept
```

Public Static Functions

```
static inline SpanContext GetInvalid() noexcept
```

Class SpanContextKeyValueIterable

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_span_context_kv_iterable.h

Inheritance Relationships

Derived Type

- public opentelemetry::trace::NullSpanContext (*Class NullSpanContext*)

Class Documentation

class SpanContextKeyValueIterable

Supports internal iteration over a collection of SpanContext/key-value pairs.

Subclassed by *opentelemetry::trace::NullSpanContext*

Public Functions

`virtual ~SpanContextKeyValueIterable() = default`

`virtual bool ForEachKeyValue(nostd::function_ref<bool(SpanContext, const opentelemetry::common::KeyValueIterable&)> callback) const noexcept = 0`

Iterate over SpanContext/key-value pairs

Parameters `callback` – a callback to invoke for each key-value for each SpanContext. If the callback returns false, the iteration is aborted.

Returns true if every SpanContext/key-value pair was iterated over

`virtual size_t size() const noexcept = 0`

Returns the number of key-value pairs

Class SpanId

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_span_id.h

Class Documentation

class SpanId

Public Functions

```
inline SpanId() noexcept  
inline explicit SpanId(nostd::span<const uint8_t, kSize> id) noexcept  
inline void ToLowerBase16(nostd::span<char, 2 * kSize> buffer) const noexcept  
inline nostd::span<const uint8_t, kSize> Id() const noexcept  
inline bool operator==(const SpanId &that) const noexcept  
inline bool operator!=(const SpanId &that) const noexcept  
inline bool IsValid() const noexcept  
inline void CopyBytesTo(nostd::span<uint8_t, kSize> dest) const noexcept
```

Public Static Attributes

```
static constexpr int kSize = 8
```

Class TraceFlags

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_trace_flags.h

Class Documentation

class **TraceFlags**

Public Functions

```
inline TraceFlags() noexcept  
inline explicit TraceFlags(uint8_t flags) noexcept  
inline bool IsSampled() const noexcept  
inline void ToLowerBase16(nostd::span<char, 2> buffer) const noexcept  
inline uint8_t flags() const noexcept  
inline bool operator==(const TraceFlags &that) const noexcept  
inline bool operator!=(const TraceFlags &that) const noexcept  
inline void CopyBytesTo(nostd::span<uint8_t, 1> dest) const noexcept
```

Public Static Attributes

```
static constexpr uint8_t kIsSampled = 1
```

Class Traceld

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_trace_id.h

Class Documentation

```
class TraceId
```

Public Functions

```
inline TraceId() noexcept  
inline explicit TraceId(std::span<const uint8_t, kSize> id) noexcept  
inline void ToLowerBase16(std::span<char, 2 * kSize> buffer) const noexcept  
inline std::span<const uint8_t, kSize> Id() const noexcept  
inline bool operator==(const TraceId &that) const noexcept  
inline bool operator!=(const TraceId &that) const noexcept  
inline bool IsValid() const noexcept  
inline void CopyBytesTo(std::span<uint8_t, kSize> dest) const noexcept
```

Public Static Attributes

```
static constexpr int kSize = 16
```

Class Tracer

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_tracer.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::trace::Tracer (*Class Tracer*)
- public opentelemetry::trace::NoopTracer (*Class NoopTracer*)

Class Documentation

class **Tracer**

Handles span creation and in-process context propagation.

This class provides methods for manipulating the context, creating spans, and controlling spans' lifecycles.

Subclassed by *opentelemetry::sdk::trace::Tracer*, *opentelemetry::trace::NoopTracer*

Public Functions

virtual ~**Tracer**() = default

virtual `nostd::shared_ptr StartSpan(nostd::string_view name, const common::KeyValueIterable &attributes, const SpanContextKeyValueIterable &links, const StartSpanOptions &options = {})` noexcept = 0

Starts a span.

Optionally sets attributes at *Span* creation from the given key/value pairs.

Attributes will be processed in order, previous attributes with the same key will be overwritten.

inline `nostd::shared_ptr StartSpan(nostd::string_view name, const StartSpanOptions &options = {})` noexcept

template<class T, nostd::enable_if_t<common::detail::is_key_value_iterable<T>::value>* = nullptr>
inline `nostd::shared_ptr StartSpan(nostd::string_view name, const T &attributes, const StartSpanOptions &options = {})` noexcept

inline `nostd::shared_ptr StartSpan(nostd::string_view name, const common::KeyValueIterable &attributes, const StartSpanOptions &options = {})` noexcept

template<class T, class U, nostd::enable_if_t<common::detail::is_key_value_iterable<T>::value>* = nullptr, nostd::enable_if_t<detail::is_span_context_kv_iterable<U>::value>* = nullptr>

inline `nostd::shared_ptr StartSpan(nostd::string_view name, const T &attributes, const U &links, const StartSpanOptions &options = {})` noexcept

inline `nostd::shared_ptr StartSpan(nostd::string_view name, std::initializer_list<std::pair<nostd::string_view, common::AttributeValue>> attributes, const StartSpanOptions &options = {})` noexcept

template<class T, nostd::enable_if_t<common::detail::is_key_value_iterable<T>::value>* = nullptr>

```

inline nostd::shared_ptr<Span> StartSpan(nostd::string_view name, const T &attributes,
                                         std::initializer_list<std::pair<SpanContext,
                                         std:: initializer_list<std::pair<nostd::string_view,
                                         common::AttributeValue>>> links, const StartSpanOptions
                                         &options = { }) noexcept

template<class T, nostd::enable_if_t<common::detail::is_key_value_iterable<T>::value>*> = nullptr>
inline nostd::shared_ptr<Span> StartSpan(nostd::string_view name,
                                         std::initializer_list<std::pair<nostd::string_view,
                                         common::AttributeValue>> attributes, const T &links, const
                                         StartSpanOptions &options = { }) noexcept

inline nostd::shared_ptr<Span> StartSpan(nostd::string_view name,
                                         std::initializer_list<std::pair<nostd::string_view,
                                         common::AttributeValue>> attributes,
                                         std::initializer_list<std::pair<SpanContext,
                                         std:: initializer_list<std::pair<nostd::string_view,
                                         common::AttributeValue>>> links, const StartSpanOptions
                                         &options = { }) noexcept

template<class Rep, class Period>
inline void ForceFlush(std::chrono::duration<Rep, Period> timeout) noexcept
    Force any buffered spans to flush.

Parameters timeout – to complete the flush

virtual void ForceFlushWithMicroseconds(uint64_t timeout) noexcept = 0

template<class Rep, class Period>
inline void Close(std::chrono::duration<Rep, Period> timeout) noexcept
    ForceFlush any buffered spans and stop reporting spans.

Parameters timeout – to complete the flush

virtual void CloseWithMicroseconds(uint64_t timeout) noexcept = 0

```

Public Static Functions

```

static inline Scope WithActiveSpan(nostd::shared_ptr<Span> &span) noexcept
    Set the active span. The span will remain active until the returned Scope object is destroyed.

Parameters span – the span that should be set as the new active span.

Returns a Scope that controls how long the span will be active.

static inline nostd::shared_ptr<Span> GetCurrentSpan() noexcept
    Get the currently active span.

Returns the currently active span, or an invalid default span if no span is active.

```

Class TracerProvider

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_tracer_provider.h

Inheritance Relationships

Derived Types

- public opentelemetry::sdk::trace::TracerProvider (*Class TracerProvider*)
- public opentelemetry::trace::NoopTracerProvider (*Class NoopTracerProvider*)

Class Documentation

class TracerProvider

Creates new *Tracer* instances.

Subclassed by *opentelemetry::sdk::trace::TracerProvider*, *opentelemetry::trace::NoopTracerProvider*

Public Functions

virtual ~TracerProvider() = default

virtual nostd::shared_ptr<*Tracer*> GetTracer(nostd::string_view library_name, nostd::string_view
library_version = "", nostd::string_view schema_url = "")
noexcept = 0

Gets or creates a named tracer instance.

Optionally a version can be passed to create a named and versioned tracer instance.

Class TraceState

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_trace_state.h

Class Documentation

class TraceState

TraceState carries tracing-system specific context in a list of key-value pairs. *TraceState* allows different vendors to propagate additional information and inter-operate with their legacy id formats.

For more information, see the W3C Trace Context specification: <https://www.w3.org/TR/trace-context>

Public Functions

`inline std::string ToHeader() const noexcept`

Creates a w3c tracestate header from `TraceState` object

`inline bool Get(nostd::string_view key, std::string &value) const noexcept`

Returns value associated with key passed as argument Returns empty string if key is invalid or not found

`inline nostd::shared_ptr<TraceState> Set(const nostd::string_view &key, const nostd::string_view &value) noexcept`

Returns shared_ptr of new `TraceState` object with following mutations applied to the existing instance:
Update Key value: The updated value must be moved to beginning of List Add : The new key-value pair
SHOULD be added to beginning of List

If the provided key-value pair is invalid, or results in transtate that violates the tracecontext specification,
empty `TraceState` instance will be returned.

If the existing object has maximum list members, it's copy is returned.

`inline nostd::shared_ptr<TraceState> Delete(const nostd::string_view &key) noexcept`

Returns shared_ptr to a new `TraceState` object after removing the attribute with given key (if present)

Returns empty `TraceState` object if key is invalid

Returns copy of original `TraceState` object if key is not present (??)

`inline bool Empty() const noexcept`

`inline bool GetAllEntries(nostd::function_ref<bool(nostd::string_view, nostd::string_view)> callback) const noexcept`

Public Static Functions

`static inline OPENTELEMETRY_API_SINGLETON nostd::shared_ptr< TraceState > GetDefault ()`

`static inline nostd::shared_ptr<TraceState> FromHeader(nostd::string_view header) noexcept`

Returns shared_ptr to a newly created `TraceState` parsed from the header provided.

Parameters `header` – Encoding of the tracestate header defined by the W3C Trace Context specification <https://www.w3.org/TR/trace-context/>

Returns `TraceState` A new `TraceState` instance or DEFAULT

`static inline bool IsValidKey(nostd::string_view key)`

Returns whether key is a valid key. See <https://www.w3.org/TR/trace-context/#key> Identifiers MUST begin with a lowercase letter or a digit, and can only contain lowercase letters (a-z), digits (0-9), underscores (_), dashes (-), asterisks (*), and forward slashes (/). For multi-tenant vendor scenarios, an at sign (@) can be used to prefix the vendor name.

`static inline bool IsValidValue(nostd::string_view value)`

Returns whether value is a valid value. See <https://www.w3.org/TR/trace-context/#value> The value is an opaque string containing up to 256 printable ASCII (RFC0020) characters (i.e., the range 0x20 to 0x7E) except comma , and equal =)

Public Static Attributes

```
static constexpr int kKeyMaxSize = 256  
  
static constexpr int kValueMaxSize = 256  
  
static constexpr int kMaxKeyValuePairs = 32  
  
static constexpr auto kKeyValueSeparator = '='  
  
static constexpr auto kMembersSeparator = ','
```

Enum Documentation

enum opentelemetry::trace::**CanonicalCode**

Values:

enumerator **OK**

The operation completed successfully.

enumerator **CANCELLED**

The operation was cancelled (typically by the caller).

enumerator **UNKNOWN**

Unknown error. An example of where this error may be returned is if a Status value received from another address space belongs to an error-space that is not known in this address space. Also errors raised by APIs that do not return enough error information may be converted to this error.

enumerator **INVALID_ARGUMENT**

Client specified an invalid argument. Note that this differs from FAILED_PRECONDITION. INVALID_ARGUMENT indicates arguments that are problematic regardless of the state of the system (e.g., a malformed file name).

enumerator **DEADLINE_EXCEEDED**

Deadline expired before operation could complete. For operations that change the state of the system, this error may be returned even if the operation has completed successfully. For example, a successful response from a server could have been delayed long enough for the deadline to expire.

enumerator **NOT_FOUND**

Some requested entity (e.g., file or directory) was not found.

enumerator `ALREADY_EXISTS`

Some entity that we attempted to create (e.g., file or directory) already exists.

enumerator `PERMISSION_DENIED`

The caller does not have permission to execute the specified operation. `PERMISSION_DENIED` must not be used for rejections caused by exhausting some resource (use `RESOURCE_EXHAUSTED` instead for those errors). `PERMISSION_DENIED` must not be used if the caller cannot be identified (use `UNAUTHENTICATED` instead for those errors).

enumerator `RESOURCE_EXHAUSTED`

Some resource has been exhausted, perhaps a per-user quota, or perhaps the entire file system is out of space.

enumerator `FAILED_PRECONDITION`

Operation was rejected because the system is not in a state required for the operation's execution. For example, directory to be deleted may be non-empty, an `rmdir` operation is applied to a non-directory, etc.

A litmus test that may help a service implementor in deciding between `FAILED_PRECONDITION`, `ABORTED`, and `UNAVAILABLE`: (a) Use `UNAVAILABLE` if the client can retry just the failing call. (b) Use `ABORTED` if the client should retry at a higher-level (e.g., restarting a read-modify-write sequence). (c) Use `FAILED_PRECONDITION` if the client should not retry until the system state has been explicitly fixed. E.g., if an “`rmdir`” fails because the directory is non-empty, `FAILED_PRECONDITION` should be returned since the client should not retry unless they have first fixed up the directory by deleting files from it.

enumerator `ABORTED`

The operation was aborted, typically due to a concurrency issue like sequencer check failures, transaction aborts, etc.

See litmus test above for deciding between `FAILED_PRECONDITION`, `ABORTED`, and `UNAVAILABLE`.

enumerator `OUT_OF_RANGE`

Operation was attempted past the valid range. E.g., seeking or reading past end of file.

Unlike `INVALID_ARGUMENT`, this error indicates a problem that may be fixed if the system state changes. For example, a 32-bit file system will generate `INVALID_ARGUMENT` if asked to read at an offset that is not in the range $[0, 2^{32}-1]$, but it will generate `OUT_OF_RANGE` if asked to read from an offset past the current file size.

There is a fair bit of overlap between `FAILED_PRECONDITION` and `OUT_OF_RANGE`. We recommend using `OUT_OF_RANGE` (the more specific error) when it applies so that callers who are iterating through a space can easily look for an `OUT_OF_RANGE` error to detect when they are done.

enumerator `UNIMPLEMENTED`

Operation is not implemented or not supported/enabled in this service.

enumerator `INTERNAL`

Internal errors. Means some invariants expected by underlying system has been broken. If you see one of these errors, something is very broken.

enumerator UNAVAILABLE

The service is currently unavailable. This is a most likely a transient condition and may be corrected by retrying with a backoff.

See litmus test above for deciding between FAILED_PRECONDITION, ABORTED, and UNAVAILABLE.

enumerator DATA_LOSS

Unrecoverable data loss or corruption.

enumerator UNAUTHENTICATED

The request does not have valid authentication credentials for the operation.

Enum SpanKind

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_span_metadata.h

enumerator **kOk**

enumerator **kError**

3.2.4 Functions

Function opentelemetry::baggage::GetBaggage

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_baggage_baggage_context.h

Function Documentation

```
inline nostd::shared_ptr<opentelemetry::baggage::Baggage> opentelemetry::baggage::GetBaggage(const  
open-  
teleme-  
try::context::Context  
&con-  
text)  
noexcept
```

Function opentelemetry::baggage::SetBaggage

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_baggage_baggage_context.h

Function Documentation

```
inline context::Context opentelemetry::baggage::SetBaggage(opentelemetry::context::Context &context,  
nostd::shared_ptr<opentelemetry::baggage::Baggage>  
baggage) noexcept
```

Function `opentelemetry::context::GetDefaultStorage`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_context_runtime_context.h

Function Documentation

```
static RuntimeContextStorage *opentelemetry::context::GetDefaultStorage() noexcept
```

Construct and return the default *RuntimeContextStorage*

Returns a ThreadLocalContextStorage

Template Function `opentelemetry::sdk::metrics::HistogramDiff`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_aggregation_histogram_aggregation.h

Function Documentation

```
template<class T>
void opentelemetry::sdk::metrics::HistogramDiff(HistogramPointData &current, HistogramPointData
&next, HistogramPointData &diff)
```

Template Function `opentelemetry::sdk::metrics::HistogramMerge`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_metrics_aggregation_histogram_aggregation.h

Function Documentation

```
template<class T>
void opentelemetry::sdk::metrics::HistogramMerge(HistogramPointData &current, HistogramPointData
&delta, HistogramPointData &merge)
```

Function `opentelemetry::sdk::resource::attr`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_sdk_include_opentelemetry_sdk_resource_experimental_semantic_conventions.h

Function Documentation

```
inline const char *opentelemetry::sdk::resource::attr(uint32_t attr)
```

Function `opentelemetry::trace::attr`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_experimental_semantic_conventions.h

Function Documentation

```
inline const char *opentelemetry::trace::attr(uint32_t attr)
```

Function `opentelemetry::trace::GetSpan`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_context.h

Function Documentation

```
inline std::shared_ptr<Span> opentelemetry::trace::GetSpan(const opentelemetry::context::Context  
&context) noexcept
```

Function `opentelemetry::trace::propagation::detail::HexToBinary`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_detail_hex.h

Function Documentation

```
inline bool opentelemetry::trace::propagation::detail::HexToBinary(std::string_view hex, uint8_t  
*buffer, size_t buffer_size)
```

Converts a hexadecimal to binary format if the hex string will fit the buffer. Smaller hex strings are left padded with zeroes.

Function `opentelemetry::trace::propagation::detail::HexToInt`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_detail_hex.h

Function Documentation

```
inline int8_t opentelemetry::trace::propagation::detail::HexToInt(char c)
```

Function `opentelemetry::trace::propagation::detail::IsValidHex`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_detail_hex.h

Function Documentation

```
inline bool opentelemetry::trace::propagation::detail::IsValidHex(nostd::string_view s)
```

Function `opentelemetry::trace::propagation::detail::SplitString`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_propagation_detail_string.h

Function Documentation

```
inline size_t opentelemetry::trace::propagation::detail::SplitString(nostd::string_view s, char  
separator, nostd::string_view  
*results, size_t count)
```

Splits a string by separator, up to given buffer count words. Returns the amount of words the input was split into.

Function `opentelemetry::trace::SetSpan`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_trace_context.h

Function Documentation

```
inline context::Context opentelemetry::trace::SetSpan(opentelemetry::context::Context &context,  
nostd::shared_ptr<Span> span) noexcept
```

3.2.5 Variables

Variable `opentelemetry::baggage::kBaggageHeader`

- Defined in file __home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_baggage_baggage_context.h

Variable Documentation

static const std::string opentelemetry::baggage::**kBaggageHeader** = "baggage"

Variable `opentelemetry::sdk::metrics::kExportIntervalMillis`

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-

3.2.7 Typedefs

TypeDef opentelemetry::common::AttributeValue

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-cpp_checkouts_v1.8.1_api_include_opentelemetry_common_attribute_value.h

TypeDef Documentation

```
using opentelemetry::common::AttributeValue = std::variant<bool, int32_t, int64_t, uint32_t, double, const char*, std::string_view, std::span<const bool>, std::span<const int32_t>, std::span<const int64_t>, std::span<const uint32_t>, std::span<const double>, std::span<const std::string_view>, uint64_t, std::span<const uint64_t>, std::span<const uint8_t>>;
```

OpenTelemetry signals can be enriched by adding attributes. The `AttributeValue` type is defined as a variant of all attribute value types the OpenTelemetry C++ API supports.

The following attribute value types are supported by the OpenTelemetry specification:

- Primitive types: string, boolean, double precision floating point (IEEE 754-1985) or signed 64 bit integer.
- Homogenous arrays of primitive type values.

Warning:

The OpenTelemetry C++ API currently supports several attribute value types that are not covered by the OpenTelemetry specification:

- `uint64_t`
- `std::span<const uint64_t>`
- `std::span<uint8_t>`

Those types are reserved for future use and currently should not be used. There are no guarantees around how those values are handled by exporters.

TypeDef opentelemetry::context::ContextValue

- Defined in file__home_docs_checkouts_readthedocs.org_user_builds_opentelemetry-
cpp_checkouts_v1.8.1_api_include_opentelemetry_context_context_value.h

TypeDef Documentation

```
